Tel: (018)299-1111/2222
Fax: (018)299-2799
Internet: http://www.nwu.ac.za

PLEASE MENTION YOUR UNIVERSITY NUMBER IN ALL CORRESPONDENCE.

The General Academic Rules of the University, to which all students have to subject themselves and which apply to all the qualifications offered by the University, appear in a separate publication and are available on the web page at: http://www.puk.ac.za/jaarboek/index_e.html.

Please note: Although the information in this Calendar has been compiled with the utmost care and accuracy, the Council and the Senate of the University accept no responsibility whatsoever for errors that may occur. Before students finally decide on the selection of modules, they must consult the class timetable. If a clash occurs in the planned selection of a student, the relevant module combination is not permitted.

Warning against plagiarism: Assignments are individual tasks and not group activities (unless explicitly indicated as group activities).

OFFICIALS

DEAN

Prof. J.J. Pienaar, H.E.D., D.Sc. (PU for CHE)

Directors

School of Physical and Chemical Sciences
Prof. C.A. Strydom, Pr.Sci.Nat., Ph.D. (UP)

School of Environmental Sciences and Development
Prof. H. van Hamburg, Pr.Sci.Nat., H.E.D. (UP), M.Sc.(Agric.) (UP), D.Sc. (UP)

School of Computer, Statistical and Mathematical Sciences
Prof. G.J. Groenewald, Hons.B.Sc. (UWC), M.Sc. (Univ. of Illinois at Urbana-Champaign) M.Sc. (UK), Ph.D. (Vrije Univ. at Amsterdam)

Unit for Business Mathematics and Informatics
Prof. J.H. Fourie, D.Sc. (PU for CHE), T.H.E.D. (PCE)

Unit for Environmental Sciences and Management
Prof. L. van Rensburg, Ph.D. (PU for CHE), H.E.D (PCE)

Unit for Space Physics
Prof. R.A. Burger, D.Sc. (PU for CHE)

Focus Area for Chemical Resource Beneficiation
Prof. H.C.M. Vosloo, Hons.B.Sc. (UOVS), Ph.D. (PU for CHO), HOD (UOVS)

Centre for Business Mathematics and Informatics
Prof. P.J. de Jongh, B.Com. (US), M.Sc. (UNISA), Ph.D. (UCT)

Centre for Human Metabonomics
Prof. B.C. Vorster, MMed (Chem Paths), (UP)

Centre for Environmental Management
Prof. J.G. Nel, B.A.(Ed.), Hons.B.A. (UPE), M.A. (UPE)

SUBJECT GROUP CHAIRPERSONS

Biochemistry
Prof. P.J. Pretorius, D.Sc. (PU for CHE)

Chemistry
Prof. H.M. Krieg, Ph.D. (PU for CHE)

Zoology
Prof. L. Du Preez, Ph.D. (UOVS)

Physics
Prof. D.J. van der Walt, B.Sc. (Stellenbosch), M.Sc. (PU for CHE), D.Sc. (PU for CHE)

Geography and Environmental Studies
Prof F P Retief, M.TRP (UFS); M.EM (UFS), Ph.D. (University of Manchester)

Geology
Prof. J-M. Huizenga, M.Sc. Geologie (Vrije Universiteit Amsterdam), Ph.D. Geologie (Vrije Universiteit Amsterdam), M.Sc. Omgewingsbestuur (Randse Afrikaans Universiteit)

Microbiology
Prof. C.C. Bezuidenhout, Pr.Sci.Nat., Ph.D. (Rhodes)

Botany
Prof. S.S. Cilliers, Ph.D., HOD (N), Nagr. Dipl. Terreineval. (PU vir CHO)

Computer Science and information Systems
Prof. H.M. Huisman, Ph.D. (PU for CHE)

Urban and Regional Planning
Prof. C.B. Schoeman, Pr.CPM, SS(SA) D.Sc.(Eng.) (Century University, USA), D.Phil. (PU for CHE)

Statistics and Operational Research
Prof. C.J. Swanepoel, Ph.D. (University of the Witwatersrand)

Mathematics and Applied Mathematics
Dr M. Hitge , Ph.D. (PU for CHE)

Natural Science, Mathematics and Technology Education
Mrs. J.A. Vorster, M.Ed. (Maths Education) (NWU-Potchefstroom Campus)
Dr S.D. Rapule, Ph.D. (Education) (North-West University)

Administrative Manager
Ms L. Grimbeek, M.A. (North-West University)

FACULTY BOARD

The Faculty Board is made up of:

- The Dean;

- School/Centre/Research/ and Focus Area Directors;

- Subject Group Chairpersons;

- Student Representatives; and

- Administrative Manager.

N.1 FACULTY RULES

N.1.1 AUTHORITY OF THE A-RULES

The faculty rules that apply to the different qualifications, programmes and curricula of the Faculty and are included in this *Calendar* are subject to the rules contained in *General Rules* of the University, as determined by the Council of the University on recommendation of the Senate from time to time, and therefore the faculty rules have to be read together with those general rules.

N.1.2 EVALUATION OF ACADEMIC LITERACY

a) All Natural Sciences students (except students in curricula N134P, N135P, N136P, N137P and N150P) must register for the module AGLA111 [Afrikaans] or AGLE111 [English]. The module selected is taken into account for purposes of credits.

b) Student enrolled for the curricula N134P, N135P, N136P, N137P and N150P, must report for a compulsory test of skills in academic literacy in order that their ability to function in an academic environment may be evaluated. The purpose of the test is to identify students who, due to inadequate academic skills, run the risk of failing to complete their study program successfully within the stipulated period. Students may decide themselves whether they want to take the test in Afrikaans or English. With the exception of students identified as borderline cases by the test, each student has only one opportunity to write the test. Students regarded as borderline cases will be afforded a second opportunity.

c) Students who are identified as borderline cases must register for module AGLA111 [Afrikaans]/AGLE111 [English], depending on the language in which they have taken the compulsory skills test. The credits earned for these modules do not contribute to the number of credits required by a curriculum, but are regarded as additional credits.

d) To be admitted to the examination in AGLA111/AGLE111 a participation mark of 35% is required. Students who are not admitted to the examination in AGLA111/AGLE111, or who fail the relevant examination, as well as two or more other modules, will have to be re-evaluated by the Evaluation Committee if they want to continue their studies the following semester. In order to avoid termination of studies, AGLA111/AGLE111 must be passed at the end of the second historic year at the latest.

e) Admission to module AGLA121/AGLE121, which is compulsory for all students who register at the University for the first time, requires that a student who had to complete AGLA111/AGLE111 beforehand, should obtain a module mark of at least 40% in AGLA111/AGLE111. The module AGLA121/AGLE121 carries a weight of 12 credits, which contributes to the number of credits required by the curriculum for which the student is registered. The module has to be taken in the language in which the compulsory skills test and AGLA111/AGLE111 were taken.

f) Students who failed the module AGLA111/AGLE111, but were allowed to continue with AGLA121/AGLE121 and who passed the examination in this module, may have the results of AGLA111/AGLE111 condoned by the relevant school director to allow for a pass mark in the module.

g)   Students who have already successfully completed a module[s]/course[s] equivalent to AGLA111, AGLA121 or AGLE111, AGLE121 at another institution and can provide proof of the relevant achievement[s], may apply in writing to the **Head of the Centre for Academic and Professional Language Practice** for formal recognition thereof.

N.1.3 WARNING AGAINST PLAGIARISM

Assignments are individual tasks and not group activities (unless explicitly indicated as group activities). For further details see:

http://www.puk.ac.za/beheer-bestuur/beleid-reels/index.html

N.1.4 CAPACITY CONSTRAINTS

Please take cognisance of the fact that, owing to specific capacity constraints, the University reserves the right to select candidates for admission to certain fields of study. This means that prospective students who comply with the minimum requirements may not necessarily be admitted to the relevant courses. Because of capacity constraints and the overflow of students in certain fields of study, students will be selected for admission to these fields according to their scholastic achievements.

N.1.5 PROVISIONAL ADMISSION REQUIREMENTS FOR UNDER-GRADUATE STUDIES (POTCHEFSTROOM CAMPUS) 2011

a)   GENERAL ADMISSION REQUIREMENTS

Taking due cognisance of the general rules and faculty rules as contained in the relevant yearbooks and with specific reference to the A-rule that determines a **National Senior Certificate** has been obtained and that the minimum statutory requirements for admission to **Diploma** and/or **B-degree studies** at a university in the RSA have been complied with, the University reserves the right to consider candidates' applications on the basis or their results.

b) **CALCULATION OF THE APS SCORE IN THE FACULTY OF NATURAL SCIENCES**

Selection model: Determining the APS

NSC scale	APS score
8 (90-100%)	8
7 (80-89%)	7
6 (70-79%)	6
5 (60-69%)	5
4 (50-59%)	4
3 (40-49%)	3
2 (30-39%)	2
1 (0-29%)	1

APS: Admission Points Score

1. APS score: Achievements in four designated and two NSC subjects are used in calculating the APS score. The mark obtained in Life Orientation is excluded.

2. Language requirement: A pass mark of 50-59% (level 4) in the language of learning and teaching at the level of Home Language or First Additional Language.

3. A student who wishes to take any of the courses in Mathematics, except for Mathematical Techniques (WISN112 or WISN113), must have obtained at least 50% (level 4) for Mathematics in the Gr 12 examination or at least 60% (level 5) in another examination in Mathematics regarded by the Senate as equivalent to the above.

Remarks:

i) Students who do not meet these requirements, but have obtained at least 40% (level 3) in the grade 12 examination or at least 50% (level 4) in another examination in Mathematics deemed by the Senate as equivalent to the above, are permitted to a refresher course in Mathematics that will be offered in January by the School of Computer, Statistical and Mathematical Sciences. If such students perform adequately in the tests that are written during this course, they may be considered for admission to studies in Mathematics modules for the B.Sc. degree.

ii) Prospective students who do not meet the matriculation requirements to enrol for WISN111, and who also have not attended the refresher course, may obtain permission to WISN111 in the second study year by passing the appropriate module in Mathematical Techniques (WISN112, WISN113 or WISN123) in the first study year, on condition that students who acquire permission along this route to programmes that would have been otherwise inaccessible, have to take into consideration that they might not be able to complete their studies in the minimum period.

iii) A student who wishes to take Mathematical Techniques (WISN112, WISN113 or WISN123), must have obtained at least 40% (level 3) for Mathematics in the grade 12 examination or at least 50% (level 4) in another examination in Mathematics deemed by the Senate as equivalent to the above.

DEGREE/DIPLOMA	REQUIRED NSC SUBJECTS PLUS SELECTION CRITERIA	APS	SELECTION TEST
B.Sc. (3 yrs.) **Programme: Physical and Chemical Sciences** *(Qualification code – 200190)*			
Chemistry-Physics **N151P** Chemistry, Mathematics-Applied Maths **N152P** Physics-Mathematics **N154P** Physics-Applied Maths **N155P**	Maths level 4 (50-59%) and Physical Science level 4 (50-59%)	20	No

Programme: Data Mining *(Qualification code – 200168)*			
Data Mining **N136P**	Mathematics level 5(60-69%)	30	**No**
B.Sc. (3 yrs.)			
Programme: Actuarial Science *(Qualification code – 200123)*			
Actuarial Science **N137P**	Mathematics level 5 (60-69%)	30	**No**

N.1.6 RECOGNITION OF PRIOR LEARNING

a) North-West University accepts the principle underlying outcomes-based, source-based and lifelong learning, in which considerations of articulation and mobility play a significant role, and subscribes to the view that recognition of prior learning, whether acquired by formal education programmes at this or another institution, or informally (from experience), is an indispensable element in deciding on admission to and awarding credits with a view to placement in an explicitly selected teaching-learning programme of the University.

b) Recognition of prior learning concerns the provable knowledge and learning that an applicant has acquired, whether by having completed formal education programmes, or from experience. At all times the question will be what the level of the skills is, and skills will be assessed in the context of the exit level skills required by the intended teaching-learning programme or modules in the programme, or the status for which the applicant applies, and not merely by virtue of the experience recorded by the applicant. Recognition of prior learning will therefore take place in terms of applied competencies demonstrated by the applicant in his/her application, taking into consideration the exit level outcomes that have to be obtained by means of the selected teaching-learning programme.

c) North-West University accepts that recognition of prior learning can and must take place in a valid, trustworthy and fair way, within the normal existing policy on awarding credits to prospective and existing students, whether they are from this or another institution.

d) For processing an application for recognition of prior learning a non-refundable administrative levy is payable as determined by the University from time to time.

N.1.7 REGISTRATION

Registration is the prescribed completed process a student has to follow to register as a student of North-West University (see general rules).

N.1.8 REGISTRATION OF ADDITIONAL MODULES

Apart from the required modules of the relevant curriculum, a student may take additional modules in terms of the provision in the general rules.

N.1.9 DURATION OF STUDIES

The minimum duration of the studies for a B.Sc. degree is three years and the maximum duration for completing the degree is four years.

N.1.10 TRAINING OF TEACHERS

The Faculty of Natural Sciences regards the training of teachers to be of such importance that information regarding the Postgraduate Certificate of Education is summarised below for the convenience of prospective education students. However, students should not neglect consulting the Calendar of the Faculty of Education Sciences for complete information.

The following curricula comply with the requirements to be admitted to the Postgraduate Certificate in Education:

Programme: Environmental and Biological Sciences

Curriculum number	Curriculum name	Specialised subject fields
N161P	Zoology-Chemistry	Physical Sciences***
N162P	Zoology-Geography	Life Sciences*
		Social Sciences (Geography)
N163P	Zoology-Microbiology	Life Sciences*
N164P	Zoology-Botany	Life Sciences
N165P	Geography-Botany	Life Sciences**
		Social Sciences (Geography)
N166P	Geography-Computer Science	Social Sciences (Geography)
		Information Technology
N167P	Microbiology-Biochemistry	Physical Sciences
N168P	Microbiology-Chemistry	Physical Sciences
N169P	Microbiology-Botany	Life Sciences**

N176P	Mathematics-Economics	Mathematics
		Economics

* Only if Botany I is selected.

** Only if Zoology is selected.

*** Only if Physics I is selected.

a)   **Nature and aims of the PGCE certificate**

The aims of the qualification are –

to enable teachers-in-training to develop practical competencies based reflexively on educational theories;

to provide a general education qualification with a view to rounding off a three-year qualification that usually does not include training in education (or achieving at least 360 credits at NQF level 6).

b)   **Duration of studies**

The minimum duration of the studies is one (1) year or the period necessary to acquire the required number of credits and the maximum duration is two (2) years. The studies are offered full-time. (See Education Sciences Calendar – this qualification is not offered part-time, but it may be taken through SBE.)

c)   **Admission requirements**

A first university degree with two recognised school subjects or a recognised qualification with a total of 360 credits at NQF level 6 and including at least **two** recognised learning areas and/or school subjects as indicated in the Calendar of Education Sciences. (See Education Sciences Calendar, P.1.5.)

Students must also be able to take **two (2**) subject methodologies in order to achieve the qualification. The course for the degree may be compiled in one of the following ways:

- recognised school subject/learning area at level 3 + recognised school subject/learning area at level 1;
- recognised school subject/learning area at level 2 + recognised school subject/learning area at level 2;
- recognised school subject/learning area at level 2 + recognised school subject/learning area at level 1 + recognised school subject/learning area at level 1 – in the case of a language candidates are advised to complete at least level 2.

When a student has to make a selection from the methodologies of academic subjects already passed for a previous qualification he/she must take the two in which he/she has the highest qualification.

A student having included only Botany, Zoology or Physiology (one at least as a major subject) and no other school subject in his/her degree course will get full recognition for his/her degree and will receive the PGCE with Life Sciences Methodology and Learning Area Natural Sciences Methodology. Such students must register for LIFD511 and LAND521, as well as LAND411 and ADSD521. (Students having only Physiology or Botany or Zoology as a main subject, will be admitted conditionally to the PGCE until the student can give proof that he/she has acquired the basic knowledge regarding botany, zoology, ecology and physiology. (See Education Sciences Calendar, P. 1.4.3.)

A student having included only Physics and Chemistry (at least one as main subject) and no other school subject in his degree course will get full recognition for his degree and the PGCE with Physical Sciences Methodology and Learning Area Natural Sciences Methodology. The student must register for PHSD511 and

11

LAND521, as well as LAND411 and ADSD521. (See Education Sciences Calendar, P. 1.4.4.)

A student who wants to take Mathematics Methodology, must have passed Mathematics at level 2, otherwise Mathematics may be presented at level 1 together one of the following at level 2: Statistics, Applied Mathematics or Financial Mathematics. A student that only has Mathematics as a major subject will register for MATD511, MATD521 and also MATD411 and ADSD521. (See Education Sciences Calendar, P.1.4.5).

A student who wants to take Life Orientation Methodology must have taken two of the following subjects at grade level: Sociology, Psychology, Political Studies, Human Movement Science, Labour and Industrial Studies, Human Rights and Ethics. The second methodology will still be for a second school subject the student must have taken at grade level. (See Education Sciences Calendar, P. 1.4.6.)

A student that wants to take the methodology of any language must have passed the language at grade level 2 at least. If the student has passed Communication Studies, level 2 of the language may be accepted. (See Education Sciences Calendar, P. 1.4.7.)

Students who have not completed their first degree yet, may be admitted by way of exception. They have to make a special application to the Director for this admission.

A student that has not acquired his/her degree yet may be permitted to enrol for the PGCE under certain circumstances and to follow the course units still lacking for his/her degree simultaneously with the PGCE studies. Special permission must be obtained from the relevant Education Sciences director. (See Education Sciences Calendar, P.1.4.8.)

d)   Directed observation

Before starting the course, the student must attend an approved school with the view of preparatory practical teaching for at least two weeks.

If there are valid reasons for a student not fulfilling this requirement, it may be undertaken earlier/later with the written consent of the Dean of the Faculty of Education Sciences.

A student who has already obtained a baccalaureus or higher degree may take three (3) semester courses at the most in academic subjects, with the consent of the Dean of the Faculty of Education Sciences, in the PGCE study year.

N.1.11 EXAMINATIONS

a)   Examination opportunities

Examination opportunities and relevant rules are in accordance with the general rules.

b)   Composition of the participation mark

The participation mark for a module (general rules) is compiled from tests, assignments and practical work. For every teaching-learning task (class tests, assignments, exercises etc.) that is carried out by means of formative assessment in a module, a mark is allocated. A student's participation mark is the weighed mean of all these marks.

In the table below the relationship between theory and practical work used in calculating the participation marks of the modules of a number of subjects is given.

SUBJECT	Theory	Practical work
Biochemistry	2	1
Chemistry	2	1
Zoology – first level	2	1
Zoology – second and third level	1	1
Physics – first level	3	1
Physics – second and third level	3	2
Physiology	2	1
Geography and Environmental Studies	1	1
Geology	1	1
Microbiology	1	1
Botany (first and second level)	2	1
Botany (third level)	1	1

c)   Admission to examinations

i.   Admission to examinations in any module is granted by acquiring a proof of participation (see general rules).

ii.   In terms of the general rules a proof of participation will only be issued to a student in the Faculty of Natural Sciences if he –

- has complied with the specific requirements of the module as set out in the relevant **study guide**;

- where applicable, has completed the practical work required for a module; and

- has obtained a participation mark of at least 35% for every first level module and 40% for every second and third level module;

iii.   proof of participation obtained for a module for the first examination opportunity is transferred without any change to the second examination opportunity (see general rules).

d)   Number of examination opportunities

The general rules regulate the number of examination opportunities. An implication of these rules is that a student who has not passed a module with the second examination opportunity will not be entitled to exemption from classes.

Students in Actuarial Science, i.e. students taking the curriculum N137P, who would like to be considered for actuarial exemption, must write their examinations during the first examination opportunity. Complete requirements for students in Actuarial Science may be obtained from the Director of the Centre for Business Mathematics and Informatics.

e)   **Module mark**

The module mark for every module is calculated (see general rules) from the participation mark and the examination mark at the ratio of 1:1.

f)   **Pass requirements of a module and a curriculum**

The terms and conditions for passing modules and curricula are set out in the general rules.

The subminimum for all modules in the examination is 40%.

Where a first-semester module (in the first year) has been failed with a module mark of not less than 40% and a second-semester module in the same subject, which follows on it and for which it is prescribed as assumed learning, is passed, the school director may award a pass mark of not more than 50% in that first-semester module. (This apply only for first year modules).

g)   **Relation between credits and teaching periods**

With regard to practical work (for example Chemistry, Physics, Zoology etc.), four continuous periods every second week are allocated for practical work at the first year level and four continuous periods per week at the second and third year level. Depending on the nature of the different subjects, deviations from this guideline might be found.

h)   **Relation between credits and examination papers**

The duration of an examination paper of a 12-credit module is usually two hours and the duration of examination papers that count for 16, 24 or 32 credits is usually three hours.

i)   **Progress in a curriculum based on prerequisites**

In compiling each curriculum care has been taken that assumed learning, i.e. the necessary prior knowledge and the general level of insight and experience needed to complete the modules prescribed with ease in a specific semester of a curriculum, has been acquired in the preceding semesters. A student having failed one or more modules in a preceding semester will therefore probably not be adequately equipped to take the modules of the following semester. Such students are URGENTLY advised to consult the director of the relevant school BEFOREHAND to find out which modules of the semester concerned they may take with a reasonable expectancy of success.

The aim of the rules below is to make sure that a student in any semester will only take those modules of which he has the minimum prior knowledge.

In the Faculty of Natural Sciences, a student may only get started on a new curriculum at the beginning of the first semester of the first study year of a curriculum. When students change from one curriculum to another, the entrance level in the new curriculum will have to be determined in consultation with the director of the school under which the relevant curriculum falls.

14

A module in any subject may only be taken if it conforms to the requirements regarding the assumed learning, as indicated in the list of modules of the relevant subject.

j)   Termination of studies

In terms of the general rules, the rules below apply in the Faculty of Natural Sciences. Students who have to apply for readmission in terms of these rules probably have neither the ability nor the motivation to complete the relevant curriculum successfully.

A student who has obtained *less* than half of the credits of year level 1 of a curriculum must apply for readmission. If this application is successful, the student will have to plan his curriculum for the second study year in consultation with the school director or his delegated.

A student who, having completed his second historic study year, has not yet obtained half of the prescribed credits of the first two years of a curriculum, must apply for readmission. If the application is successful, the student will not be permitted to take any modules from year level three in his historic third study year, but he will only be allowed to register for the lacking modules of year levels 1 and 2.

A student who, having completed his third historic study year, has not yet obtained all of the credits of the first two study years of the curriculum, must apply for readmission. If this application is successful, the student's curriculum for his fourth study year will have to be planned in consultation with the director of the relevant school.

Important: No student's studies will be terminated in terms of these faculty rules before he and/or his parents have been invited in writing to explain his circumstances personally or in writing to the Dean.

N.1.12   PROFESSIONAL STATUS

Any person who has obtained one of the following qualifications in a natural science field at a university in South Africa and has acquired experience as indicated below, may register as a Professional Natural Scientist (Pr.Sci.Nat.) with the South African Council for Natural Scientific Professions:

- 4-year B.Sc. or Hons.B.Sc. plus three years of experience in a natural science profession;

- M.Sc. plus two years of experience in a natural science profession;

- D.Sc. or Ph.D. plus one year of experience in a natural science profession.

- A Masters degree complying with the requirements as set out by the South African Medical and Dental Council is the minimum qualification for registering as a Medical Scientist in terms of items 32(1) and 61(4) of the *Act on Physicians, Dentists and Additional Health Services*. In the case of clinical biochemistry, a B.Sc. degree is required for registration. Students who took the B.Art. et Scien. degree may apply for membership of the South African Council for Town and Regional Planners.

At least 50% of the modules in this qualification must be from natural sciences.

At least two appropriate **first** and **second semester modules** (in Physics, Mathematics, Chemistry, Botany or Zoology) must be taken at first year level.

Students who have obtained the B.Art et Scien.(Planning) qualification may apply for registration as a Candidate Planner, according to the regulations (Planning Professions Act, 36 of 2002) of the South African Council for Planners (SACPLAN). After a minimum of two years in practice and completion of the instructions for registration, such a student will be able to register as a Professional Planner [TRP (SA)/SS(SA)].

N.1.13 MODULES LACKING TO COMPLETE DEGREE

If a student lacks five modules at the most to complete his/her degree, these modules may be completed at UNISA, subject to the following conditions:

- The degree must be completed within five years. If it takes longer, a written application must be made for extension of the studies.

- At least one core module must be completed at NWU.

- The student must register both at NWU and at UNISA.

N.1.14 SCHOOLS IN THE FACULTY

The Faculty of Natural Sciences consists of three schools and a centre, of which each one is made up different subject groups. At the head of each school/centre is a director and he/she is assisted by a subject chairperson from each subject group. The schools/centre are responsible for teaching graduate, honours and lectured master's programmes. These schools/centre and the subjects groups that make up each school are represented in the following table:

School	Subject Group
School of Physical and Chemical Sciences	Biochemistry
	Chemistry
	Physics
	Natural Science, Mathematics and Technology Education (Specialises in training teachers)
School of Environmental Science and Development	Zoology
	Geography and Environmental Management
	Geology
	Microbiology
	Botany
	Urban and Regional Planning
School of Computer, Statistical and Mathematical Sciences	Computer Science and Information Systems
	Statistics and Operational Research
	Mathematics and Applied Mathematics

Centre for Business Mathematics and Informatics	Actuarial Science
	Data-mining
	Financial Mathematics
	Quantitative Risk Management

Research in the Faculty is managed in research entities. These research entities are further responsible for the master's and doctoral training programmes, i.e. programmes that contain a significant research component. At the moment, there are three research units, viz. Business Mathematics and Informatics, Environmental Sciences and Management, Space Physics, and the research focus area, Chemical Resource Beneficiation, as well as two centres, viz. 1) Human Metabomomics and 2) Business Mathematics and Informatics.

N.2   QUALIFICATIONS, PROGRAMMES AND CURRICULA

Different qualifications (degrees) can be obtained in the Faculty of Natural Sciences. A specific qualification may be obtained in one or more programmes (the term *programme* indicates a specific field of study), and in each programme one or more curricula are available. A prospective student must therefore first decide which qualification he wants to obtain. For example, after a student has decided he would like obtain a B.Sc. degree, he has to select a programme, for instance the physical and chemical programme, the computer and mathematical programme or the environmental and biological programme etc. If the student decides on the environmental and biological programme for instance, he must then study the different curricula offered in this programme and finally decide on a curriculum. Information and the rules for the different qualifications, programmes and curricula are explained in this Calendar.

North-West University is authorised to award the following degrees in undergraduate studies in the Faculty of Natural Sciences:

LIST OF QUALIFICATIONS AND PROGRAMMES

Qualification	Programme and code	Curriculum and curriculum code	Method of delivery
Baccalaureus Scientiae (B.Sc.)	Physical and Chemical Sciences: 200 190	Chemistry-Physics **N151P** Chemistry, Mathematics-Applied Mathematics **N152P** Physics-Mathematics **N154P** Physics-Applied Mathematics **N155P** Chemistry-Biochemistry **N174P** Biochemistry-Physiology **N179P**	Full-time

Baccalaureus Scientiae (B.Sc.)	Computer and Mathematical Sciences 200 191	Physics-Computer Science **N153P** Computer Science-Statistics **N156P** Computer Science-Mathematics **N157P** Statistics-Mathematics **N158P** Mathematics **N159P** Computer Science-Economics **N175P** Mathematics-Economics **N176P**	Full-time
Baccalaureus Scientiae in Information Technology (B.Sc.IT)	Information Technology-Computer Science 264 100	Information Technology and Computer Sciences **N150P**	Full-time
Baccalaureus Scientiae (B.Sc.)	Environmental and Biological Sciences: 200 118	Geology-Geography **N147P** Geology-Botany **N148P** Botany-Chemistry **N149P** Zoology-Biochemistry **N160P** Zoology-Chemistry **N161P** Zoology-Geography **N162P** Zoology-Microbiology **N163P**	Full-time

		Zoology-Botany **N164P**	
		Geography-Botany **N165P**	
		Geography-Computer Science **N166P**	
		Microbiology-Biochemistry **N167P**	
		Microbiology-Chemistry **N168P**	
		Microbiology-Botany **N169P**	
		Botany-Biochemistry **N170P**	
		Geology-Chemistry **N180P**	
		Geology-Microbiology **N181P**	
Baccalaureus Scientiae (B.Sc.)	Tourism 200 119	Tourism-Zoology-Botany **N171P**	Full-time
		Tourism-Geography-Botany **N172P**	
		Tourism-Geography-Zoology **N173P**	
Baccalaureus Scientiae (B.Sc.)	Quantitative Risk Management 200 166	Quantitative Risk Management **N134P**	Full-time
Baccalaureus Scientiae (B.Sc.)	Financial Mathematics 200 167	Financial Mathematics **N135P**	Full-time
Baccalaureus Scientiae (B.Sc.)	Data Mining 200 168	Data Mining **N136P**	Full-time

Baccalaureus Scientiae (B.Sc.)	Actuarial Science 200 123	Actuarial Science **N137P**	Full-time
Baccalaureus Artium et Scientiae (B. Art. et Scien.)	Urban and Regional Planning 118 101	Urban and Regional Planning with Geography and Environmental Studies **N178P**	Full-time

N.3 RULES FOR THE DEGREE BACCALAUREUS SCIENTIAE (B.Sc.)

N.3.1 DURATION (MINIMUM AND MAXIMUM DURATION)

The minimum duration of the studies for a B.Sc. degree is three years and the maximum duration for completing the degree is four years.

N.3.2 ADMISSION REQUIREMENTS OF THE QUALIFICATION

See paragraph N.1.5.

N.3.3 FACULTY-SPECIFIC REQUIREMENTS

See paragraph N.1.5.2.

N.3.4 STRUCTURE OF A GENERIC BACCALAUREUS SCIENTIAE DEGREE

The diagram shows how a generic B.Sc. degree is compiled. Professional degrees are compiled differently.

	Semester 1							Semester 2						
Year 1 (Tot. cr.= 120)	12	12	12	12		12 AGLA		12	12	12	12		12 AGLA	
Year 2 (Tot. cr. = 120)	8	8	8	8	8	8	12 WVNS	8	8	8	8	8	8	12 WVNS
Year 3 (Tot. cr.= 128)	16		16		16		16	16		16		16		16
TOTAL CREDITS (368)	184 credits							184 credits						

N.3.5 OUTCOMES OF A GENERIC BACCALAUREUS SCIENTIAE DEGREE

i)   General

At the end of the studies, the student will have the ability to integrate the basic knowledge and techniques of the core subjects in the curriculum he completed with a view to investigating phenomena in nature relevant to the core subjects of the curriculum and solving relevant problems.

ii)   Knowledge

The student must have a thorough knowledge of the core subjects of the curriculum he completed in order to be able to apply his knowledge; to understand the physical reality in terms of this knowledge; and to be ready to continue with postgraduate studies in one of the core subjects.

iii)   Skills

The student must have acquired the following skills:

- the ability to retrieve knowledge and information electronically and otherwise in preparation of lifelong learning;

- the ability to perform mathematical-analytical and mathematical-numerical data processing, problem solving and modelling;

- the ability to process, evaluate and report on scientific information;

- where applicable, the basic laboratory skills;

- the ability to work in groups and where necessary to exercise the necessary leadership.

iv)   Values

The student ought to have acquired the following values:

- the ability to understand and strive after the normative aspects of practising science and in this way demonstrate a sense of responsibility towards fellow human beings and the environment in scientific investigations;

- scientific honesty and integrity.

v)   Curricula

All of the curricula in this programme are compiled from the module list in N.14.

Every year a student registers subject to the rules valid for the specific year. If the curriculum for which a student registered the previous year has been changed in this Calendar, the curriculum of the student will be adapted according to the version in this Calendar. If possible, adaptation will be done in such a way that a student's load of studies will not be aggravated.

If obstacles such as insurmountable clashes in the schedule should arise because of necessary curriculum changes, the Dean may decide that students who enrolled previously must switch to the changed curriculum, even if an aggravation should result.

In the case where students have to repeat one or more modules at a specific year level of a curriculum, the following apply:

- The total number of credits of the modules taken by a student in any semester at any year level, also by the student who has to repeat modules, is limited in accordance with the general rules.

- The Faculty cannot undertake that modules that have to be repeated and the other modules that must be taken will all fit in the class schedule. Clashes that arise because of modules that have to be repeated will result in the student having to take those modules in a future year.

- If a student has not completed the modules of a specific year level of the curriculum for which he enrolled in the minimum prescribed period of study, and the modules of the specific year level of the curriculum have since been changed, the Dean may decide that the student must complete the relevant year level as published in the latest edition of the Calendar. This means that if a student must repeat a module that has since been replaced by another module, the Dean may decide that the student must take the latter module.

vi)   Articulation possibilities

- Credits will be awarded for modules that have been passed in other faculties or at other universities, provided such modules contribute to the outcomes and total credit requirements of the curriculum concerned.

- With the basic and applied skills that the student has acquired by this qualification in the mathematical, computer and natural science disciplines he will be prepared to continue further learning in several specialised subject areas at other institutions.

N.4 PROGRAMME: PHYSICAL AND CHEMICAL SCIENCES (200190)

N.4.1 SPECIFIC PROGRAMME OUTCOMES

a) General

At the end of the studies, the student will have the ability to integrate the basic knowledge and techniques of Physics and Mathematics in the curriculum he completed with a view to investigating phenomena in nature relevant to the core subjects of the curriculum and solving relevant problems.

b) Knowledge

- The student must have knowledge and insight into concepts, structures, procedures, models, theories, principles, research methods and the place and boundaries of science in man's life.
- The student must understand the physical reality in terms of this knowledge.
- Besides knowledge of the subject, the student must also have insight into the encyclopaedia and coherence of science by understanding amongst others that problems are not solved in isolation.
- The student must be ready to continue with postgraduate studies in one of the core subjects.

c) Skills

The student must have the following skills:
- identifying and solving problems in a critical and creative manner;
- embarking on entrepreneurship;
- retrieving knowledge and information;
- applying effective and responsible self-management;
- describing natural phenomena in a mathematical-analytical and mathematical-numerical manner;
- problem solving and modelling;
- applying sufficient knowledge and experience in an applicable programming language and/or data visualising software in order to do basic processing and calculations and to represent results graphically;
- investigating astrophysical phenomena empirically (experimentally) with an optical telescope, processing data meaningfully, representing it graphically and interpreting it in a theoretical framework;
- basic laboratory skills;
- acquiring, commanding, applying, analysing, integrating and evaluating knowledge in a well-founded manner;
- communicating knowledge scientifically in different media and therefore having command of listening, reading, talking, writing, arguing and computer skills;
- using science and technology adequately, effectively and responsibly with regard to the environment and own health and that of others;
- demonstrating efficient leaning skills, realising the importance of life-long learning;
- accuracy and punctuality;
- articulating and justifying an own way of thinking (paradigm);
- processing and evaluating scientific information and reporting on it;
- working in a group and exercising/accepting leadership.

25

d) Values

The student must have the following skills:
- understanding and pursuing the normative aspects of science and by doing that demonstrating a sense of responsibility towards society and environment in scientific research;
- scientific honesty;
- thinking in a principled way, which becomes clear in well-founded adaptability;
- pursuing excellence;
- devotion and integrity.

e) Awareness of the importance of:

- participating as a responsible citizen in the activities of the local, national and international community;
- cultural and esthetical sensitivity to the variety of social structures, and the possibilities and constraints of a plural society.

N.5 PROGRAMME: COMPUTER AND MATHEMATICAL SCIENCES (200191)

N.5.1 PROGRAMME OUTCOMES

The goal of this qualification is to deliver graduates in an outcomes-based programme in the subjects Computer Science, Mathematics and Economics. Graduates who have completed this programme will be able to serve nationally as programmers, systems analysts and database administrators. The qualification will equip graduates with degree level expertise and appropriate skills in the field of computer science. A worldwide shortage, especially in South Africa, of well-qualified and equipped human resources exists, especially in the field of mathematics. The programme delivers graduates who have the ability to apply their proficiency in the economic sector of the country.

The graduates who have completed this programme will be able to serve in the financial sector, IT business, industry and education. Depending on their focus within this program, they will be ready to continue postgraduate studies in computer, mathematical and economic sciences.

N.5.2 ADMISSION REQUIREMENTS OF THE QUALIFICATION

See paragraph N.1.5.

N.5.3 FACULTY-SPECIFIC ADMISSION REQUIREMENTS

N.6 PROGRAMME: ENVIRONMENTAL AND BIOLOGICAL SCIENCES (200118)

N.6.1 SPECIFIC PROGRAMME OUTCOMES

On completing this programme, the student must be able –

- to demonstrate a well-rounded and systematic knowledge base of the biological and earth sciences, with the focus on environmental sciences, which comprise aspects of zoology, botany, microbiology, geology, soil science, environmental management and geography;
- to demonstrate a coherent and critical understanding of applicable key terms, rules, concepts, principles and theories, and be able to place new knowledge in existing theoretical frameworks and apply processes and techniques in a wider environmental perspective;
- to identify and analyse general environmental problems and issues and to use the most important research methods to propose theoretically driven solutions;
- to demonstrate well developed skills in gathering information, analysing and integrating quantitative and qualitative data and communicating information, own ideas and opinions, in writing and orally, using well structured arguments and IT skills effectively;
- to act as a lifelong student in the job market and to participate in value-adding economic activities in an entrepreneurial way.

N.6.2 ADMISSION REQUIREMENTS OF THE QUALIFICATION

See paragraph N.1.5.

N.6.3 FACULTY-SPECIFIC ADMISSION REQUIREMENTS

See paragraph N.1.5.2.

N.6.4 CURRICULUM: GEOLOGY-GEOGRAPHY – N147P

N.6.4.1 Faculty-specific rules for the curriculum

A compulsory soil mapping camp takes place for second-year soil science students (i.e. students who have registered for GDKN 221) during the winter recess. Second-year students will hand in a soil map and a report, of which the mark will contribute to the practical mark for GDKN221. Third-year geology students (i.e. students who have registered for GLGN 321) will attend a compulsory geology mapping camp in the same period. A geological map and a report will be handed in during the second semester, of which the mark contributes to laboratory mark for GLGN 321. NO excuses for absence from the mapping camp will be accepted. In the event of illness, the onus is on the student to catch up with the work and to hand in the required assignments, maps and reports, as applicable, to be considered for admission to the examination.

Compilation of curriculum N147P

N.7   PROGRAMME: TOURISM

The Faculty Board of Natural Sciences has approved a number of curricula that provide a good basic training in tourism. In compiling the curricula, possible occupations and our country's need for human resources were also considered. These curricula also prepare the student for postgraduate studies (Honours in Environmental Sciences). These studies are recommended in view of registration with the South African Council for Natural Scientific Professions (SACNASP).

N.7.1   SPECIFIC PROGRAMME OUTCOMES

On completing this programme, the student must be able –

- to demonstrate a well-rounded knowledge and insight into the subject contents of fundamental, core and alternative modules of subject combinations completed, and the application of these the multidisciplinary environmental and tourism field;
- to demonstrate skills in identifying and analysing environmental- and tourism problems and in collecting, evaluating and interpreting the necessary information and data and using these to propose possible solutions and also to manage human resources in a creative way;
- as an individual or member of a group, to communicate in an ethical and responsible manner information and solutions verbally, electronically and in writing to peers and professional people;
- to use entrepreneurial skills in identifying opportunities in practice and developing these while maintaining respect for society and the environment.

N.7.2   ADMISSION REQUIREMENTS OF THE QUALIFICATION

See paragraph N.1.5.

N.7.3   FACULTY-SPECIFIC ADMISSION REQUIREMENTS

See paragraph N.1.5.2.

**Selection possibilities depend on the student's choice for undergraduate studies: Zoology/Tourism

N.8 PROGRAMME: QUANTITATIVE RISK MANAGEMENT (200166)

N.8.1 PROGRAMME OUTCOMES

The programme outcomes discussed for the B.Sc. degree in N.3 also apply to this programme. In addition, the student will also have the following **specific** knowledge and skills.

a) Knowledge

On completing the programme, the student will have adequate knowledge and insight into the following topics:

- Functioning of an economy, introductory micro- and macroeconomics, determining the national income and the influence of different policy measures on it, national accountancy concepts and the macro-equilibrium equation, economic conjuncture and stabilisation, transferring funds between countries, exchange rate systems, balance of payment and international monetary system; monetary policy in South Africa.

- The impact of the asset and liability management of banks on the national economy. Risk, liquidity policy, lending policy, liability management and the apportionment of capital by banks, the South African futures market. Functioning of derivative instruments and their application to risk hedging.

- The nature, aim and basic theory of accountancy. Financial statements, fixed assets and depreciation. Control, departmental and manufacturing accounts. Partnerships, close corporations and appropriate GAAP viewpoints.

- Probability theory, sampling theory and techniques, and statistical inference.

- Theory and topology of real numbers and finite dimensional vector spaces, algebraic and measurable spaces, integrals of measurable functions and monotone convergence, linear transformations between general vector spaces, complex functions, ordinary and partial linear differential equations, optimisation.

- Basic computer literacy, object-directed programming language, artificial intelligence, data structures and algorithms, and modern IT developments.

b) Skills

On completing this programme, the student will have the following skills:

- The ability to identify and solve convergent and divergent quantitative risk management problems in a creative and pro-active manner.

- In-depth knowledge of and insight into the financial markets and financial risk instruments and related problems, together with the ability to solve problems in interaction with other disciplines.

- The ability to identify and develop quantitative financial risk, computer and data analysis techniques and/or approaches on an entrepreneurial basis with a view to managing financial risks.

- The ability to work efficiently as an individual or in a team in an organisation in order to address quantitative financial risk management problems.

- The ability to organise and manage own activities in a responsible and efficient manner to attain desired aims.

- The ability to handle questionnaires, meaningful data collecting methods, data presentation methods and exploratory data evaluation by using amongst others statistical computer software (e.g. Statistica, S-Plus and SAS), as well as standard executive inference methods over wide range.
- The ability to prepare and present written an oral reports and presentations professionally.
- Mathematical modelling of practical problems by using partial differential equations, combinatory mathematics, linear programmes and optimisation methods, together with computerised implementation where applicable.
- Programming in a modern high-level language, together with the ability to analyse and design computer systems and algorithms.
- The ability to handle database management systems with ease.

c) Articulation possibilities

The programme grants admission to postgraduate studies in Hons.B.Sc.(BMI) programmes and may grant admission to honours studies in Economics, Statistics or Computer Science. The honours B.Sc.(BMI) programmes are subject to the following requirements:

Honours curriculum	Graduate curriculum
N610P	N134P or N135P or N136P
N611P	N135P
N612P	N136P

N.8.2 ADMISSION REQUIREMENTS OF THE QUALIFICATION

See paragraph N.1.5.

Students who do not have accounting as school subject, must do the basic accounting course at the beginning of the first semester in the first year. If the student pass with 60% or more the student can register for ACCF111 in the first semester. Students who get less than 60% for the course must register for ACCS111. If a student received 40% at the end of the first semester in ACCF111, the student can be allowed to ACCF121 in the second semester. *Please compare with the Faculty of Economic and Management Sciences yearbook.*

Permission requirements for all Business Mathematics and Informatics courses (N134P, N135P, N136P and N137P), Mathematics 60-69% (level 5), APS Score 30.

Mathematics Refresher course

Before the classes start in the beginning of the year, there will be a refresher course for Mathematics. All students that enroll for curriculums where the module WISN111 appear, are strongly recommend to do the refresher course.

N.9   PROGRAMME: FINANCIAL MATHEMATICS (200167)

N.9.1   PROGRAMME OUTCOMES

The programme outcomes discussed for the B.Sc. degree in N.3 applies also to this programme. In addition, the student will have the following **specific** knowledge and skills.

a)   Knowledge

On completing the programme, the student will have adequate knowledge and insight into the following topics:

- Functioning of an economy, introductory micro- and macroeconomics; determining the national income and the influence of different policy measures on it; national accountancy concepts and the macro-equilibrium equation; economic conjuncture and stabilisation; transferring funds between countries; exchange rate systems; balance of payment and international monetary system; monetary policy in South Africa.

- The impact of the asset and liability management of banks on the national economy. Risk, liquidity policy, lending policy, liability management and the apportionment of capital by banks; the South African futures market. Functioning of derivative instruments and their application to risk hedging;

- The nature, aim and basic theory of accountancy. Financial statements, fixed assets and depreciation. Control, departmental and manufacturing accounts. Partnerships, close corporations and appropriate GAAP viewpoints;

- Probability theory, sampling theory and techniques and statistical inference;

- Theory and topology of real numbers and finite dimensional vector spaces; algebraic and measurable spaces; integrals of measurable functions and monotone convergence; linear transformations between general vector spaces; complex functions, ordinary and partial linear differential equations; optimisation;

- Basic computer literacy; object-based programming language; artificial intelligence; data structures and algorithms, and modern IT developments.

b)   Skills

On completing this programme, the student will be able to demonstrate that he/she has the following skills:

- The ability to identify and solve convergent and divergent quantitative risk management problems in a creative and pro-active manner.

- In-depth knowledge and insight into the financial markets and financial instruments and relevant problems, together with the ability to solve problems in interaction with other disciplines.

- The ability to identify and develop quantitative financial risk, computer and data analysis techniques and/or approximations on an entrepreneurial basis, in order to manage financial risks.

- The ability to work effectively as an individual or in a team in an organisation to address quantitative financial risk problems.

- The ability to organise and manage own activities in a responsible and efficient manner to attain desired aims.

- The ability to handle questionnaires, meaningful data collecting methods, data presentation methods and exploratory data evaluation by using amongst others statistical computer software (e.g. Statistica, S-Plus and SAS),as well as standard executive inference methods over wide range
- The ability to prepare and present written an oral reports and presentations professionally.
- Mathematical modelling of practical problems by using partial differential equations, combinatory mathematics, linear programmes and optimisation methods, together with computerised implementation where applicable.
- Programming in a modern high-level language, together with the ability to analyse and design computer systems and algorithms.
- The ability to handle database management systems with ease.

c)   Articulation possibilities

The programme grants admission to postgraduate studies in Hons.B.Sc.(BMI) programmes and may grant admission to honours studies in Economics, Statistics or Computer Science. The honours B.Sc.(BMI) programmes are subject to the following requirements:

Honours curriculum	Undergraduate curriculum
N610P	N134P or N135P or N136P
N611P	N135P
N612P	N136P

N.9.2   ADMISSION REQUIREMENTS OF THE QUALIFICATION

N.11 PROGRAMME: ACTUARIAL SCIENCE (200123)

The Faculty of Natural Sciences has approved one curriculum that provides a good basic training in actuarial science. In compiling this curriculum, possible occupations and our country's need for human resources were also considered. Furthermore this curriculum prepares the student for postgraduate studies in actuarial science (Hons.B.Sc., curricula N609P), which are recommended with a view to registration with the South African Council for Natural Scientific Professions (SACNASP).

N.11.1 PROGRAMME OUTCOMES

a) **Knowledge**

On completing the programme, the student will have adequate knowledge and insight into the following topics:

- Functioning of an economy. Introductory micro- and macroeconomics. Determining the national income and the influence of different policy measures on it. National accounting concepts and the macro-equilibrium equation. Economic conjuncture and stabilisation. Transferring funds between countries, exchange rate systems. Balance of payment and international monetary system. Monetary policy in South Africa.

- The impact of the asset and liability management of banks on the national economy. Risk, liquidity policy, lending policy, liability management and the apportionment of capital by banks, interaction between bank risks and the monetary policy and regulations of the Reserve Bank. South African futures market. Functioning of derivative instruments and their application to risk hedging.

- The nature, aim and basic theory of accountancy. Financial statements, fixed assets and depreciation. Control, departmental and manufacturing accounts. Partnerships, close corporations and appropriate GAAP viewpoints.

- Close corporations, conversion of enterprises, company financial statements, pre-incorporation income, debentures, analysis and interpretation of financial statements, cash flow, deferred taxes. Lease agreements in financial statements, earnings per share, adjustments for previous years and group financial statements.

- Probability theory, sampling theory and techniques.

- Theory and topology of real numbers and finite dimensional vector spaces, algebraic and measurable spaces, integrals of measurable functions and monotone convergence, linear transformations between general vector spaces, ordinary and partial linear differential equations and optimisation.

- Basic computer literacy, including the operation and components of a computer, storage of data, use of a spreadsheet and problem solving.

- Object-based programming language, including the basic structures, data types, methods, classes, objects and problem solving.

71

b) Skills

On completing this programme, the student will be able to demonstrate that he/she has the following skills:

- Identifying and solving convergent and divergent actuarial financial problems in a creative and pro-active manner.

- In-depth knowledge and insight into the financial markets and financial instruments and relevant problems, together with the ability to solve problems in interaction with other disciplines.

- Identifying and assessing financial risk, computer and data analysis techniques and/or approximations on an entrepreneurial basis, in order to manage financial risks.

- The ability to work effectively as an individual or in a team in an organisation and to address actuarial and financial problems.

- The ability to identify and investigate training and occupational possibilities in actuarial science, as well as research possibilities.

- The ability to master questionnaires and meaningful data collecting methods, to handle data presentation methods and exploratory data evaluation by using amongst others statistical computer software (e.g. Statistica, S-Plus and SAS), together with standard executive inference methods over wide range.

- The ability to prepare and present professional written and oral reports.

- Mathematical modelling of practical problems by using partial differential equations, combinatory mathematics, linear programmes and optimisation methods, together with computerised implementation where applicable.

- Programming in a modern high-level language, together with the ability to analyse and design computer systems and algorithms.

- The ability to do calculations, analyse and solve problems with the aid of a spreadsheet and to design algorithms and handle problems in an object-based programming language.

c) Articulation possibilities

The programme grants admission to postgraduate studies in the Hons.B.Sc. (Actuarial Science) programme and May also grant admission to honours studies in Economics and Statistics. Students who passed the Hons.B.Sc. (Actuarial Science) may also apply for admission to the Master's Degree in Business Mathematics and Informatics (see Postgraduate Calendar).

N.11.2 ADMISSION REQUIREMENTS OF THE QUALIFICATION

See paragraph N.1.5.

Students who do not have accounting as school subject, must do the basic accounting course at the beginning of the first semester in the first year. If the student pass with 60% or more the student can register for ACCF111 in the first semester. Students who get less than 60% for the course must register for ACCS111. If a student received 40% at the end of the first semester in ACCF111, the student can be allowed to ACCF121 in the second semester. *Please compare with the Faculty of Economic and Management Sciences yearbook.*

N.12   PROGRAMME: INFORMATION TECHNOLOGY AND COMPUTER SCIENCE (264 100)

N.12.1   PROGRAMME OUTCOMES

This programme provides a good basic training in information technology. In compiling the curricula for this programme the Faculty also considered possible occupations and the need of our country for human resources. Furthermore this programme prepares the student for postgraduate studies (Hons.B.Sc. and/or M.Sc.) in computer science, which are recommended in view of registration with the South African Council for Natural Scientific Professions (SACNASP).

Programme outcomes as discussed for the B.Sc. degree (programme chemical-physical-computer and mathematical sciences) in N.2.3.3 also apply to this qualification. Apart from those the student will also have the following specific knowledge and skills, viz. he will have the ability to:

a)   contribute in a professional manner and according to modern, acceptable methodologies to the design, development and delivery of computer systems in accordance with business needs and principles;

b)   contribute meaningfully to the management of information and information sources on the basis of his knowledge and understanding of appropriate concepts, structures, models, theories, principles and research methods;

c)   solve IT relevant problems in the context of approaches and techniques of other appropriate disciplines by means of a thorough, practice-directed knowledge of and insight into the field of information technology (IT);

d)   realise the necessity to ensure continuing competency and to remain at the forefront of the latest technology and techniques, and as a lifelong student to stay involved with these by means of established and well-developed learning skills;

N.12.2   ADMISSION REQUIREMENTS OF THE QUALIFICATION

N.13 RULES FOR THE DEGREE BACCALAUREUS ARTIUM ET SCIENTIAE (PLANNING)

N.13.1 PROGRAMME OUTCOMES

The Faculty Board of Natural Sciences has approved curriculum N178P, which provides a good basic training in urban and regional planning. In compiling this curriculum, possible occupations and our country's need for human resources were also considered. This curriculum also conforms to the requirements of the South African Council for Town and Regional Planners and prepares the student for admission to studies of the degree M.Art. et Scien.(Plan.)

On completing this programme, the student should be able:

- to demonstrate a broad and systematic knowledge base of urban and regional planning and techniques, and of other subject-specific contents that have been presented in the programme to bring about sustainable development in urban and rural environments;

- to have the ability to identify, analyse and argue theoretically driven solutions to complex and real-life planning problems and issues in an ethically responsible way;

- to demonstrate skills to collect, analyse critically, to process by computer, to integrate and evaluate results of current research and scientific and professional literature in the field of urban and regional planning, as well as quantitative and qualitative data, and to communicate his/her findings to peers and professional persons in writing and orally;

- to act as entrepreneur by utilising knowledge and skills in planning consultation and development.

N.13.2 DURATION (MINIMUM AND MAXIMUM DURATION)

The minimum duration of the studies for this degree is four years and the maximum duration for completing the degree is four years.

N.13.3 ADMISSION REQUIREMENTS OF THE QUALIFICATION

a) The requirements of this qualification with regard to prior learning are described in N.1.8.

b) **Students are only admitted to the B. Art. et Scien.(Plan.) degree if they have been selected for admission. A maximum of 25 candidates, i.e. first-time university students, will be selected annually.**

N.13.4 FACULTY-SPECIFIC ADMISSION REQUIREMENTS

N.14 RULES FOR THE DEGREE BACCALAUREUS SCIENTIAE (INDUSTRIAL SCIENCE)

NB No new registrations from 2010. The programme is phased out.

N.14.1 MINIMUM EN MAXIMUM DURATION

The minimum duration of studies for this degree is four years and the maximum duration for completing the degree is five years.

N.14.2 PROGRAMME: CHEMISTRY-CHEMICAL ENGINEERING

The Faculty of Natural Sciences has approved one curriculum that provides a good basic training in chemical sciences and technology. In compiling this curriculum, possible occupations and our country's need for human resources were also considered, and the curriculum was developed in close association with the chemical industry. Furthermore, this curriculum prepares the student for master's studies in Chemistry or Chemical Engineering. Having acquired appropriate experience the successful candidate may register with the South African Council for Natural Scientific Professions (SACNASP).

N.14.3 PROGRAMME OUTCOMES

On successfully completing this degree the student will be able to provide proof of his subject knowledge, skills and values regarding the exit level outcomes following below.

a) **Knowledge**

- Knowledge of fundamental, chemical, physical and mathematical subject-specific contents as indicated by the programme.
- Familiarity with scientific terminology and nomenclature.
- In-depth knowledge of the use of laboratory apparatus and techniques.
- Knowledge of industrial processes and operational methods.

b) **Skills**

- The ability to retrieve knowledge and information electronically and otherwise in preparation of lifelong learning.
- Familiarity with different learning strategies and management of time.
- The ability to process, evaluate and report on scientific information.
- The ability to identify relationships between structures (reagents), driving forces and processes.
- The ability to perform elementary and advanced problem solving.
- Control of basic laboratory skills.
- The ability to work in groups and where necessary to exercise or accept leadership.

c) **Values, conduct and attitudes**

- Understanding the impact of scientific actions.

- Awareness of scientific honesty and integrity.

d) Articulation possibilities

- On successfully completing the B.Sc.(Ind.Sc.), the student will have direct admission to the master's degree in Chemistry and Chemical Engineering.

- Credits will be awarded for modules of other faculties and institutions, provided the outcomes and total credit requirements of this programme as a whole are met.

- The basic and applied skills in the mathematical and natural science disciplines the student has acquired by this qualification equip him to continue further learning in several specialist areas at other institutions.

- Students with credits from other tertiary institutions at levels 5a, 5b and 6 will be evaluated by the Dean for possible admission to further studies in the B.Sc.(Ind.Sc.) curriculum.

N.16   MODULES

N.16.1   METHOD OF DELIVERING

All modules are offered full-time by means of contact teaching.

N.16.2   ASSESSMENT METHODS

Assessment will be communicated to students at the outset of each semester.

Assessment methods include:

a) Formative assessment methods (homework, class tests, semester tests, reports on practical sessions, assignments) and other appropriate methods.

b) Summative assessment methods, including a two or three hour examination paper.

N.16.3   MODULE OUTCOMES

Module code: ACCC111	Semester 1	
Title: Framework, foundations, cycle and financial reporting		
Module outcomes:		

On completion of the module, the student should be able to:

• demonstrate a basic knowledge of the principles of the accounting cycle, including the recording of transactions and adjustments from source documents in the subsidiary journals/ledgers and general ledger of an entity;

• understand the accounting framework and the basic elements of financial statements, including their recognition and measurement criteria;

• prepare a set of basic financial statements, in the correct format, based on the information in a trial balance or general ledger, including basic disclosure in the notes to the financial statements; and record transactions incurred by clubs and other non-profit enterprises in the subsidiary ledgers, general ledger and financial statements.

Module code: ACCC121	Semester 2	
Title: Accounting for different entities		
Module outcomes:		

On completion of the module, the student should be able to:

• apply the definitions, recognition and measurement criteria of the different elements of financial statements, as well as the principles regarding the presentation of financial statements to a given situation;

• distinguish between different entity forms, including sole proprietors, partnerships, companies and closed corporations, and account for transactions in the records of each of these entity forms;

• effectively use information technology in the recording of transactions in the records of an entity; and effectively work together with others as part of a team or group.

Module code: ACCF111	Semester 2	

Title**: Financial Accounting: Basic Concepts, Accounting Systems and Elementary Financial Reporting**

On completing the module the student should be able:
- to explain the purpose and function of accounting;
- to demonstrate a clear insight into the accounting equation;
- to compile journals, ledgers, subsidiary ledgers and control account
- to design a accounting system that will comply with the requirements of a specific entity;
- to prepare bank reconciliations;
- to calculate claims against insurers for inventory losses;
- to record transactions and compile financial statements for sole traders and departmental accounts.

Module code: ACCF121	Semester 2	

Title**: Financial Accounting: Elementary Financial Reporting, Partnerships, Close Corporations and Companies**

On completing the module the student should be able:
- to record transactions in the accounting records;
- to record transactions in the statement of receipt and payments;
- to compile a statement of comprehensive income (income statement) and a statement of the financial position (balance sheet) for non-trading enterprises;
- to compile annual financial statements of partnerships and to compile annual financial statements for close corporations according to the requirements of Generally Accepted Accountancy Practice (GAAP);
- to demonstrate a clear insight into the different types of company shares, record transactions for issuing and redeeming shares and compile elementary financial statements for companies.

Module code: ACCS111	Semester 2	

TITLE: **Financial Accounting (Special) – Basic Concepts, Accounting Cycle and Accounting Systems**

On completing the module the student should be able:
- to explain the purpose and function of accounting;
- to record transactions in journals, ledger accounts and control accounts;
- to design an accounting system for a specific enterprise;
- to compile financial statements for a sole proprietor of an enterprise.

Module code: ACCS121	Semester 2	

TITLE: **Financial Accounting (Special): Bank Reconciliation, Elementary Financial Reporting and Analysis and Interpretation of Financial Statements**

On completing the module the student should be able:
- to record transactions in the cash receipts and payment journal and to compile a bank reconciliation statement;
- to compile the statement of comprehensive income (income statement), statement of financial position (balance sheet) and statement of change in equity for a sole trader in a generally accepted format;
- to identify financial ratios and to be able to explain and apply their purpose in analysing and interpreting the liquidity, profitability and solvency of a sole trader.

Module code: FINM211	Semester 2	
TITLE: FINANCIAL MANAGEMENT: INTRODUCTION		

Module outcomes:

Upon completion of this module, you should be able to:

• understand the role of financial management and the financial manager in a business organisation and identify the primary goal of financial management;

• understand the concept of the time value of money and perform calculations;

• understand the relationship between risk and return and evaluate the risk and return of organisations based on the necessary calculations; understand the basic accounting statements and concepts and perform an evaluation of financial performance using financial statement analysis to assess the current financial condition of the firm;

• demonstrate a knowledge of the characteristics of the principle forms of finance used by companies and the ways in which they may be issued;

• demonstrate a basic knowledge of the characteristics of financial instruments and how they can be applied by companies to hedge against risk;

• demonstrate a complete and systematic knowledge of the factors to be considered by a company when deciding on its capital structure;

• demonstrate the skills to calculate the cost of the different sources of finance and the weighted average cost of capital of a company; and understand and apply the various techniques in evaluating capital investment projects.

Module code: AGLE111	Semester 1	NQF: 5
Title: **Introduction to Academic Literacy**		
Module outcomes: On completion of this module the student should be able to • demonstrate basic knowledge of learning strategies, academic vocabulary and register as well as the reading and writing of academic texts in order to function effectively in the academic environment; • communicate effectively orally and in writing in an appropriate manner in an academic environment; • understand, interpret, and evaluate basic academic texts and write appropriate academic genres in a coherent manner by making use of accurate and appropriate academic conventions; • listen, speak, read and write accurately, fluently and appropriately in an ethical framework.		
Method of delivery: Full-time		
Assessment methods: Tests and assignments — weight: 60% Semester exam 1x2 hours — weight: 40%		

Module code: AGLE121	Semester 2	NQF: 5

Title: Academic Literacy

Module outcomes: On completion of this module, students should be able to

- demonstrate fundamental knowledge of appropriate computer programs, as well as apply learning, listening, reading and writing strategies, use academic language register and read and write academic texts, in order to function effectively in the academic environment;
- as an individual and a member of a group communicate effectively orally and in writing in an ethically responsible and acceptable manner in an academic environment;
- as an individual and a member of a group find and collect scientific knowledge in a variety of study fields, analyse, interpret, and evaluate texts, and in a coherent manner synthesise and propose solutions in appropriate academic genres by making use of linguistic conventions used in formal language registers.

Method of delivery: Full-time

Assessment methods:
Tests and assignments — weight: 60%
Semester exam 1x2 hours — weight: 40%

Module code: BCHN213	Semester 1	

Title: Introductory Biochemistry

Module outcomes:

Knowledge:

At the end of this module the student will have the knowledge and insight:

- to understand the scope and range of Biochemistry;
- to compare pro- and eukaryotic cells;
- to distinguish between the informative and non-informative macromolecule;
- to know the primary and higher-order structure of DNA;
- to describe DNA replication, as well as its accuracy;
- to know the structure and function of the different types of RNA;
- to explain the role of special nucleotide sequences and the proteins involved in transcription and translation;
- to be able to explain the role of special and the proteins involved in transcription;
- to give a description of the transcription and translation process;
- to be able to describe processes and their meaning, such as recombination, mutagenesis, transpositions, genetic implanting/infixion and non-amplification;
- to explain the structure and functioning of an operon with reference to examples.

Skills:

At the end of the module the students have to be able:

- to appreciate the fundamental nature of biochemistry, especially in biological sciences;
- to isolate and partially characterise nucleic acids;
- to decipher genetic information;
- to construct mind maps of the structure and the processes in which nucleic acids are involved.

Module code: BCHN222	Semester 2	

Title: **Metabolism**

Module outcomes:

Knowledge:

At the end of this module the student will have the knowledge and insight:

- to be able to give the substrates, products and role of the three phases of metabolism;
- to be able to describe interim electron carriers and give the role of each;
- to know the general structure of carbohydrates, lipids, amino acids and nucleotides;
- to be able to describe the processes involved in the catabolism of carbohydrates, lipids, amino acids and nucleotides;
- to be able to describe the processes involved in the anabolism of carbohydrates, lipids, amino acids and nucleotides
- be able to describe the role of the Krebs Cycle in the final oxidation of piruvate and acetyl-CoA;
- to be able to describe the role of the electron transfer chain in the excitation of chemical-osmotic potential;
- to be able to defend hypotheses for oxidative phosphorylation;
- to be able to describe the mechanisms of detoxification by means of cytochrome-P_{450};
- to be able to describe tissue-specific reactions and their role in metabolism;
- to have a good insight into the interdependency of the different components of metabolism.

Skills:

At the end of the module the student will be able:

- to integrate the different metabolic pathways;
- to anticipate the consequences of metabolic defects;
- to perform and interpret metabolic screening tests.

Module code: BCHS311	Semester 1	

Title: **Enzymology and Metabolism**

Module outcomes:

Knowledge:

At the end of this module the student will have the knowledge and insight:

- to understand the structural-functional relationship of enzymes well;
- to be able to describe the concepts of catalysis and kinetics of single and multistrate enzyme-catalysed reactions and to process the kinetic investigations;
- to be able to describe the different types of inhibitions and to process the kinetic investigations;
- to know the properties of allosteric enzymes, sigmodial behaviour of enzymes and to be able to interpret and give their importance in metabolic reactions.

Skills:

At the end of the module the student will have acquired skills in:

- mastering enzyme kinetics for medical, industrial and biotechnical applications;
- optimising/problem solving as regards enzyme-catalysed reactions.

Module code: BCHS312	Semester 1	

Title: **Molecular and Analytical Biochemistry**

Module outcomes:

Knowledge:

At the end of this module the student will have knowledge and insight:

- to describe the metabolic pathways involved in the catabolism and anabolism of the different biomolecules;
- to name and describe the experimental approaches, results en conclusions that led to the clarification of the reactions;
- to describe and discuss the intra- and interregulations of the metabolic pathways;
- to be able to describe and discuss each of the biomolecules in congenital and other selected diseases.

Skills:

At the end of this module the student will be able:

- to give a metabolic description of defects;
- to suggest method(s) of treatment;
- to suggest industrial and biotechnological applications.

Module code: BCHS321	Semester 2	

Title: **Analytical Biochemistry**

Module outcomes:

Knowledge:

At the end of this module the student will have the knowledge and insight to be able:

- to describe the basic principles of the methods for generating recombinant DNA molecules;
- to know and apply the different methods for isolating and characterising cloned genes;
- to describe the complexity of eukaryotic genomes;
- to explain the different mechanisms for regulating eukaryotic non-expression
- to explain and apply the methods of characterising genetic defects;
- to describe the potential of and development in the field of non-therapy;
- to explain the molecular basis of cancer and AIDS.

Skills:

At the end of this module the student will be able:

- to plan and perform cloning experiments, to process and interpret the results;
- to give a molecular description of defects in non-structure and non-expression;
- to appreciate the scope and application of genetic engineering.

Module code: BCHS322	Semester 2	

Title: **Independent Project**

Module outcomes:

Knowledge:

At the successful completion of this module, the student should have acquired the following knowledge and insight:

- The student must be able to conduct independent study utilising information systems like libraries and the Internet;
- The student must be able to identify gaps in specific areas;
- The student must be able to demonstrate technologically feasible approaches which will lead to problem solving;

- The student must be able to implement analytical techniques like radiometry, photometry, liquid chromatography, gas chromatography and mass spectrometry in the empirical analysis of the formulated problem;
- The student must be able to process and convey data on a scientifically acceptable way;
- The student must be able to critically evaluate data and suggest alternative approaches;
- The student must be able to prepare reports in the form of research reports, articles and presentations.

Skills:
At the end of this module, the student must be able to:
- Study independently by utilizing information systems like the Internet;
- Formulate a hypothesis;
- Decide on and implement a specific experimental technique;
- Critically evaluate data;
- Prepare reports (in the form of articles) and presentations.

Module code: BMAN111	Semester 1	

Title: Introduction to business management

Module outcomes:
Upon completion of this module, you should be able to demonstrate:
• a complete and systematic knowledge of the nature of business management, establishment issues of a new business, the different business functions and the basic elements of a business plan;
• skills, based upon an informed comprehension of theories and concepts, to identify established issues of a new business, identify the different business functions and to draw up a basic SWOT analysis and business plan; and
• the ability to undertake a literature and environmental review, prepare a basic report as individual or as a member of a team and to communicate in writing as well as verbally he report to an audience.

Module code: BWIA221	Semester 2	

Title: **Modern Portfolio Theory (A205/CT8)**

Module outcomes:
On completion of the module the student will demonstrate a sound knowledge and understanding of:

(i) the meaning of the term "utility function".
(ii) the advantages and disadvantages of different measures of investment risk.
(iii) the assumptions of mean-variance portfolio theory and its principal results.
(iv) the properties of single and multifactor models of asset returns.
(v) asset pricing models through discussing the principal results and assumptions and limitations of such models.
(vi) the various forms of the Efficient Markets Hypothesis and discuss the evidence for and against the hypothesis.

The student will also as an individual or as a member of a group demonstrate the ability to:

(a) solve well-defined but unfamiliar problems using correct procedures and appropriate evidence
(b) perform a critical analysis and synthesis of information

(c)   present information using basic information technology
(d)   present and communicate information reliably and coherently, using academic/professional discourse conventions and formats appropriately
through integrated assessment of objectives (i) to (vi) in the form of project(s).

Module code: BWIA271	Year module
Financial Mathematics (A201/CT1)	

Module outcomes:

(i)   using a generalised cashflow model to describe financial transactions.

(ii)   taking into account the time value of money using the concepts of compound interest and discounting.

(iii)   showing how interest rates or discount rates may be expressed in terms of different time periods.

(iv)   real and money interest rates.

(v)   calculating the present value and the accumulated value of a stream of equal or unequal payments using specified rates of interest and the net present value at a real rate of interest, assuming a constant rate of inflation.

(vi)   the definitions and use of more important compound interest functions including annuities certain.

(vii)   the definition of an equation of value.

(viii) describing how a loan may be repaid by regular instalments of interest and capital.

(ix)   using discounted cashflow techniques in investment project appraisal.

(x)   describing the investment and risk characteristics of the following types of asset available for investment purposes:

(a)   fixed interest government borrowings

(b)   fixed interest borrowing by other bodies

(c)   shares and other equity-type finance

(d)   derivatives

(xi)   analysing elementary compound interest problems.

(xii)   calculating the delivery price and the value of a forward contract using arbitrage free pricing methods.

(xiii) the term structure of interest rates.

(xiv)   simple stochastic models for investment returns.
The student will also as an individual or as a member of a group demonstrate the ability to:

(a)   solve well-defined but unfamiliar problems using correct procedures and appropriate evidence

(b)   perform a critical analysis and synthesis of information

(c)   present information using basic information technology

(d)   present and communicate information reliably and coherently, using academic/professional discourse conventions and formats appropriately

Module code: BWIA311	Semester 1

Title: **Models: Survival Models and Stochastic Processes (A202/CT4)**

Module outcomes:

On completion of the module the student will demonstrate a well-rounded and systematic knowledge and coherent and critical understanding of:
(i)   the principles of actuarial modelling.
(ii)   the general principles of stochastic processes, and their classification into different types.
(iii)   the definition and application of a Markov chain.
(iv)   the definition and application of a Markov process.
(v)   the concept of survival models.
(vi)   the estimation procedures for lifetime distributions.
(vii)   the derivation of maximum likelihood estimators for the transition intensities in models of transfers between states with piecewise constant transition intensities.
(viii) the Binomial model of mortality inclusive of the derivation of a maximum likelihood estimator for the probability of death and the comparison of the Binomial model with the multiple state models.
(ix)   how to estimate transition intensities depending on age, exactly or using the census approximation.
(x)   how to test crude estimates for consistency with a standard table or a set of graduated estimates.
(xi)   the process of graduation.
The student will also as an individual or as a member of a group demonstrate the ability to:
(a)   deal with unfamiliar concrete and abstract problems and issues using evidence-based solutions and theory-driven arguments
(b)   use well-developed information retrieval skills
(c)   perform a critical analysis and synthesis of quantitative and/or qualitative data
(d)   use appropriate IT skills to present results using prescribed formats
(e)   present and communicate information and their own ideas and opinions in well-structured arguments
(f)   show an awareness of audience and using academic/professional discourse appropriately
through integrated assessment of objectives (i) to (xi) in the form of project(s).

Module code: BWIA312	Semester 1

Title: **Actuarial Statistical Models (A204/CT6)**

Module outcomes:
On completion of the module the student will demonstrate a well-rounded and systematic knowledge and coherent and critical understanding of:
(i)   the concepts of decision theory and the application of them.
(ii)   the calculation of probabilities and moments of loss distributions both with and without limits and risk-sharing arrangements.
(iii)   the construction of risk models involving frequency and severity distributions and the calculation of the moment generating function and the moments for the risk models both with and without simple reinsurance arrangements.
(iv)   the concept of ruin for a risk model. This will include the calculation of the adjustment coefficient and being able to state Lundberg's inequality. This also include the effect on the probability of ruin of changing parameter values and of simple reinsurance arrangements.
(v)   the fundamental concepts of Bayesian statistics and using these concepts to calculate Bayesian estimators.
(vi)   techniques for analysing a delay (or run-off) triangle and projecting the

ultimate position through applying the techniques.

(vii)   the fundamental concepts of a generalised linear model (GLM) and describing
how a GLM may be applied.
The student will also as an individual or as a member of a group demonstrate the
ability to:
  (a)   deal with unfamiliar concrete and abstract problems and issues using
evidence-based solutions and theory-driven arguments
  (b)   use well-developed information retrieval skills
  (c)   perform a critical analysis and synthesis of quantitative and/or
qualitative data
  (d)   use appropriate IT skills to present results using prescribed formats
  (e)   present and communicate information and their own ideas and opinions
in well-structured arguments
  (f)   show an awareness of audience and using academic/professional
discourse appropriately
through integrated assessment of objectives (i) to (vii) in the form of project(s).

Module code: BWIA321	Semester 2

Title: **Actuarial Statistical Models: Time Series (A204/CT6)**

Module outcomes:

Objectives

On completion of the module the student will demonstrate a well-rounded and systematic
knowledge and coherent and critical understanding of:

(i)   the concept and general properties of stationary, $I(0)$, and integrated, $I(1)$,
univariate time series.
(ii)   the concept of a stationary random series.
(iii)   the concept of a filter applied to a stationary random series.
(iv)   the notation for backwards shift operator, backwards difference operator,
and the concept of roots of the characteristic equation of time series.
(v)   the concepts and basic properties of autoregressive (AR), moving average
(MA), autoregressive moving average (ARMA) and autoregressive integrated
moving average (ARIMA) time series.
(vi)   the concept and properties of discrete random walks and random walks with
normally distributed increments, both with and without drift.
(vii)   the basic concept of a multivariate autoregressive model.
(viii)   the concept of cointegrated time series.
(ix)   certain univariate time series models having the Markov property and how to
rearrange a univariate time series model as a multivariate Markov model.
(x)   the processes of identification, estimation and diagnosis of a time series, the
criteria for choosing between models and the diagnostic tests that might be
applied to the residuals of a time series after estimation.
(xi)   other non-stationary, non-linear time series models.
(xii)   simple applications of a time series model, including random walk,
autoregressive and cointegrated models as applied to investment variables.
(xiii)   the development of deterministic forecasts from time series data, using simple
extrapolation and moving average models, applying smoothing techniques
and seasonal adjustment when appropriate.
(xiv)   the concepts of "Monte Carlo" simulation using a series of pseudorandom
numbers.

The student will also as an individual or as a member of a group demonstrate the ability to:
(a)   deal with unfamiliar concrete and abstract problems and issues using evidence-

	based solutions and theory-driven arguments
(b)	use well-developed information retrieval skills
(c)	perform a critical analysis and synthesis of quantitative and/or qualitative data
(d)	use appropriate IT skills to present results using prescribed formats
(e)	present and communicate information and their own ideas and opinions in well-structured arguments
(f)	show an awareness of audience and using academic/professional discourse appropriately

through integrated assessment of objectives (i) to (xiv) in the form of project(s).

Module code: BWIN123	Semester 2	

Title: **BMI Project: Financial Mathematics**

Module outcomes:
At the end of this module, the student will have acquired knowledge and insight into the calculation of interests, time value of money, present and future values, nominal and effective interest rates and annuities and loans. The concepts are presented in the form of a self-created project. In this module, the student acquires skills to handle vaguely defined problems and to integrate concepts from the financial-economic world that can be quantified with the aid of mathematical models and solved by means of computer spreadsheet-based implementation. Specific attention is given to playing off simulation versus the analytical, as well as to discrete versus stochastic modelling of such problems.

Module code: BWIN321	Semester 2	

Title: **BMI Project: Capital Markets Modelling and Analysis**

Module outcomes:
After completion of the module the student should:

- demonstrate a well-rounded and systematic knowledge and coherent and critical understanding of and insight into the mathematical modelling and analysis of financial instruments;
- be able to derive and apply mathematical formulas to price and hedge linear claims such as futures contracts and swaps as well as derive and apply binomial pricing of options;
- be able to use the MS Excel software package (or SAS/IML) to practically implement basic numerical procedures to price vanilla options using binomial trees;
- as an individual or as a member of a group demonstrate the ability to plan and conduct research according to standard protocol and to employ appropriate processes, procedures and techniques to solve problems in the field of capital markets modelling and analyses, communicate results effectively, orally and in writing, and to make use of appropriate technologies in all communications. Act ethically sound in dealing with issues and people.

Module code: CHEM111	Semester 1	

Title: **Introductory Inorganic and Physical Chemistry**

Module outcomes:
On completing the module the student should be able:
- to demonstrate fundamental knowledge and insight into the properties of matter and compounds, molecular interaction, aqueous solutions, chemical equilibriums, acids and bases, formation of precipitates and electron transfer reactions and to apply this knowledge to write and name chemical formulae;
- to balance reaction equations, to use stoichiometric and other calculations to

determine an unknown quantity, and to explain tendencies and relationships according to the Periodic Table (main groups);
- to demonstrate skills in applying laboratory and safety regulations;
- to be competent to explain observed chemical phenomena, do calculations relating to these, communicate results scientifically and to understand applications of these in industry and the environment better.

Module code: CHEM121	Semester 2	

Title: **Introductory Organic Chemistry**

Module outcomes:
On completing the module the student should be able:
- to demonstrate knowledge and insight to classify and name organic compounds;
- to know the physical properties and chemical reactions of unsaturated carbohydrates, alkylhalides, alcohols, carbonyl compounds, carboxylic acids and their derivatives, as well as a few aromatic compounds;
- and to describe the mechanism of selected organic reactions.

Module code: CHEM311	Semester 1	

Title: **Analytical Methods III**

Module outcomes:
Knowledge:
The student will have acquired knowledge and insight to describe molecular spectrometric techniques (ultraviolet, infrared, nuclear magnetic resonance, mass spectrometry), X-ray spectroscopy, separation methods (liquid and supercritical fluid chromatography, electrophoresis), thermal methods (differential thermal analysis, differential scanning calorimetry and thermogravimetry, DMA and TMA), electrochemistry (potentiometry, coulometry, conductometry, voltammetry and amperemetry), radiochemistry, the basic measurement with analytical instruments and relevant sampling preparation techniques.

Skills:
The practical sessions enable the student to use the different analytical instruments responsibly in order to determine the structures of chemical compounds and to measure their properties experimentally; subsequently, to evaluate and communicate these measurements in a meaningful way; and to realise what role the analytical chemist has to play in the welfare of the community and environment.

Module code: CHEN211	Semester 1	

Title: **Analytical Methods II**

Module outcomes:
At the end of this module the student will have acquired knowledge and insight to describe analysis as a process (sampling, sample preparation, separation, quantifying, evaluating) to evaluate analytical data, to do analytical calculations and to describe gravimetric methods, volumetric methods (acid-base, complexiometric), atomic spectrometric methods (atomic absorption and emission spectroscopy, inductively coupled plasma), surface characterising methods (microscopy) and separation methods (extraction, column and thin-layer chromatography). The student will also have become familiar with general laboratory techniques and chemical analytical techniques with a view to quality control and control laboratories, and have developed the ability to learn 'classical' analytical methods him-/herself, to conduct chemical analyses in a responsible way and to evaluate analytical results.

Module code: CHEN212	Semester 1	

Title: **Physical Chemistry II**

Module outcomes:
The thermodynamic and kinetic methods of approach in studying chemical and/or biological processes are studied at an introductory level in this module. On completing this module, the student (1) will have command of the conceptual background, theoretical knowledge and operational competency to determine and interpret thermodynamic quantities and (2) will be familiar with basic kinetic concepts and have the ability to calculate kinetic quantities from which he/she will also be able to make process-mechanistic deductions.

Module code: CHEN213	Semester 1	

Title: **ORGANIC CHEMISTRY II**

Module outcomes:
At the successful completion of this module, the student will have acquired the knowledge and insight of the naming, structure and chemical characteristics of a range of poly functional compounds, which include amide and esters, alkenes, carbonyls, alcohols and carboxylic acid, as well as five and six membered hetero cyclical compounds. Furthermore, the student will have obtained knowledge and understanding of the basic principles of aromaticity, the chemistry of diazo compounds and the reaction mechanisms of electrophilic and nucleophilic aromatic substitution reactions. The student will be able to predict synthesis routes for, and orientation and reactivity of, aromatic compounds by applying the permanent effects.

Module code: CHEN222	Semester 2	

Title: **Inorganic Chemistry II**

Module outcomes:
At the successful completion of this module, the student should be able to describe the atom structure of the s- and p-group elements and compound bond theories that apply to these elements; to know and understand the chemical reactions of the more important s- and p-elements and to apply the tendencies in the periodic table; to acquire proper laboratory skills in a range of different synthesis techniques for the s- and p-group compounds; and to behave responsibly in a laboratory.

Module code: CHEN223	Semester 2	

Title: **Organic Chemistry II**

Module outcomes:
Knowledge
At the end of this module the student will be familiar with:
- the basic principles and rules of aromaticity;
- drawing resonance and chemical structures;
- identifying permanent and temporary effects and applying them to predict the sequel of reactions;
- the principles of electrophilic and nucleophilic aromatic substitution reactions with special reference to orientation, reactivity and mechanism;
- illustrating general and name reactions of aromatic and heterocyclic compounds with appropriate examples and mechanisms;
- suggesting synthesis routes for preparing specific aromatic compounds.

Skills
At the end of this module the student will be familiar with:
- setting up appropriate glass apparatus;

103

- the correct and safe handling of chemicals;
- the dangers of chemicals;
- making scientific observations during experiments and noting these down in the correct way;
- obtaining pure compounds at the end of a synthesis;
- the theoretical background of the experiments;
- laboratory techniques and skills;
- doing appropriate scientific calculations and completing an experimental report.

Module code: CHEN312	Semester 1	

Title: **Physical Chemistry III**

Module outcomes:
On completing this module the student will have acquired the operational knowledge and practice-directed subject insight to use the framework of the three main chemical theories for non-ideal (real) process types as base a) to determine and interpret thermodynamic and electrochemical quantities; b) determine and mechanistically explain reaction-kinetic parameters and c) explain quantum-chemically the origin of molecular spectra and calculate molecular and spectroscopic quantities from these spectra. This three-fold process enables the student to have a better understanding of chemical applications in practice and to develop a feeling for strategies to find solutions for the industry and environment.

Module code: CHEN321	Semester 2	

Title: **Inorganic Chemistry III**

Module outcomes:
By means of this module the student acquires basic knowledge and insight into the principles and applications of coordinate compounds, becomes familiar with the use of transition elements in industry, get to know representative reactions and properties of d- and f-group elements and develops the ability to predict their properties and reactions; and learns to plan and carry out a practical project in the synthesis of transition metal complexes and present the results systematically.

Module code: CHEN322	Semester 2	

Title: **Organic Chemistry III**

Module outcomes:
At the end of this module, the student will have the knowledge and insight to predict stereochemical implications of the most important reaction types. Knowledge is acquired about the chemical properties of polyfunctional compounds containing carbonyl, as well as five- and six-member heterocyclic compounds. The student will be familiar with the most general rearrangement reactions found in organic chemistry and will be able to solve elementary synthesis problems. Laboratory skills and synthesis techniques in the laboratory are mastered.

SUBJECT GROUP: ZOOLOGY

Module code: DRKS111	Semester 1	

Title: **Lower Invertebrates**

Module outcomes:
On completing the module the student ought to demonstrate a thorough knowledge of the systematics, classification, form and function of lower invertebrate animals; to identify and explain the relationships between the different phyla; to demonstrate a thorough knowledge of the most important parasites of humans, animals and plants; to demonstrate skills in the optimal use of different kinds of microscopes; in making accurate drawings with captions, drawing up tables and using dichtomous identification keys.

Module code: DRKS121	Semester 2	

Title: **Higher Invertebrates and Chordates**

Module outcomes:
On completing module the student ought to demonstrate a thorough knowledge of the systematics, classification, form and function of animals; the relationships between the different phyla; the morphological building plan and adaptation of animals that enable them to survive and procreate; the most important parasites of humans and animals; the evolutionary development of chordates from lower chordates up to the human being; to have skills in using different types of microscopes; making accurate drawings with captions; drawing up tables and using dichtomous identification keys; to conduct research in Zoology, more specifically, to have the ability to see to it that Zoology plays a meaningful and ethically correct role in Environmental Sciences.

Module code: DRKN211	Semester 1	

Title: **Developmental Biology**

Module outcomes:
On completing the module the student ought to demonstrate knowledge and informed insight into the structure of DNA and RNA, mutagenic impact of UV- and radioactive radiation, pesticide pollution of the environment, use of genetically manipulated food, the origin and extinction of species, Mendelian genetics and other hereditary patterns, evolution theory and evolutionism; to demonstrate skills to predict and mathematically calculate the results of cross-breeding experiments from a given genotype, to identify, draw and name the different embryonic development stages of selected chordate animals, to use the different types of microscopes optimally and to be able to conduct the experimental procedure for obtaining live *Xenopus*-embrios; to participate effectively in group work skills and use appropriate scientific language in order to communicate in writing and orally; to have an appreciation for the variety and unity in the created reality and the processes involved in the inception of a new life; to be aware of the ethical aspects regarding the treatment of live experimental animals (vertebrates) and to treat them with the necessary respect, and to be aware of the ethical aspects involved in cloning as well.

Module code: DRKS221	Semester 2	

Title: **Comparative Animal Physiology**

On completing the module the student should be able to demonstrate fundamental knowledge and informed insight into specialised breathing organs of different kinds of animals, as well as into several aspects of the physiology, including respiration, thermoregulation, energy metabolism, osmotic regulation and movement of different animal groups; to demonstrate skills to analyse and explain the physico-chemical properties of the environment, with reference to their bearing on the gas exchange in the specialised breathing organs of different animals; to demonstrate skills to set up and conduct laboratory experiments regarding ammoniac excretion, carbon dioxide respiration, upstream flow

mechanisms, glomerular filtration and the measurement of soluble oxygen; to demonstrate the ability to complete laboratory projects as a member of a group and to communicate the results to peers in the format of a written report and as an oral talk.

Module code: DRKS311	Semester 1	

Title: **Ecology**

On completing the module the student should be able to demonstrate well-rounded and systematic knowledge and insight into ecology and all its consequences and to relate it to other aspects of zoology and other subject fields; to demonstrate skills to describe interactions between organisms, as well as their interactions with the abiotic environment, and to research and describe the impact of human activities on the ecology by making use of appropriate statistics and models; to demonstrate the ability as an individual and/or as member of a group, to identify and characterise ecological problems, to research relevant literature, to collect data and to communicate possible solutions to peers in an ethical and responsible way, in writing and orally

Module code: DRTS311	Semester 1	

Title: **Ecology: Tourism**

On completing the module the student should be able to demonstrate well-rounded and systematic knowledge and insight into aspects of ecology applicable to tourism, such as ecological concepts, resources and conditions, basic population dynamics and community ecology, and be able to demonstrate application of this knowledge in practice by relating it to other aspects of zoology and other subject groups; to demonstrate skills to research and describe interactions between organisms and their interactions with the abiotic environment, as well as the impact of human activities on the ecology by making use of appropriate methods, statistics and models; to demonstrate he/she has the ability as an individual or as a member of a group, to identify and characterise ecological problems, research relevant literature, collect data and to communicate possible solutions to peers in an ethical and responsible way, in writing and orally.

Module code: DRKN321	Semester 2	

Title: **Parasitology**

On completing the module the student should be able to demonstrate a well-rounded and systematic knowledge and insight into human and animal parasitology with regard to definitions and epidemiological concepts; to demonstrate skills in terms of identification and classification of parasites, as well as to explain their impact on the health of the human being; to demonstrate the ability to identify epidemiological problems with regard to parasitology, to provide information on ways of preventing contamination, to recommend drugs and treatment and ways to take measures of prevention; to demonstrate skills to identify factors responsible for spreading and transmission of parasites and apply the relevant findings to epidemiological investigation and control programmes..

Module code: DRKS322	Semester 2	

Title: **Ethology**

On completing the module the student should be able to demonstrate a well-rounded and systematic knowledge and insight into ethology and all its consequences, and to relate it to other aspects of zoology and other subject fields; to explain the coherence of animal behaviour with other aspects of zoology in particular (ecology, evolution, physiology etc.), but also with other fields in general, such as botany, conservation, sociology and psychology; to demonstrate he/she has the ability as an individual and/or as a member of a group, to plan and carry out a project, to present a report in writing on the project, and to explain the project by means of a talk; to argue the context of animal behaviour in creation.

Module code: ECON111	Semester 1	

Title: Introduction to Economics

On completing this module you should:
- be able to demonstrate fundamental knowledge and insight into the basic functioning of the economy and its different components, the economic problem of scarcity, limited resources and unlimited needs, the way in which the different economic systems try to solve this problem and the ways in which fiscal, monetary and other policy measures are applied to reach specific economic objectives;
- have skills as an individual and/or as a member of a group to interpret and analyse the behaviour of the most important economic agents, such as consumers and producers;
- have skills as an individual and as a member of a group to interpret and analyse the economic data of the fiscal, monetary and other types of policy in South Africa;
- have the ability to identify, evaluate and solve clear-cut routines and new economic problems (such as unemployment and high inflation rates) in the South African context by means of proven methods, procedures and techniques;
- have the ability to collect information from given sources, to select information suitable to the task, to analyse, synthesise and evaluate that information, and to communicate the results and/or proposals in an ethically healthy manner in writing and in an oral demonstration by means of appropriate information technology.

Module code: ECON121	Semester 2	

Title: Basic Micro- and Macroeconomics

Module outcomes:

On completing this module, you should be able to demonstrate:
- fundamental knowledge and insight into the principles and theories on which microeconomics, macroeconomics and the Simple Macroeconomic Model are based and also have the ability to apply concepts and terminology in answering well-defined problems and case studies;
- fundamental knowledge of the interaction between and interdependence of economic participants and economic indicators;
- skills to analyse and evaluate case studies, examples and problems of certain macro- and microeconomic phenomena, with reference to demand, supply, equilibrium, consumption, production, price elasticity and various forms of competition;
- fundamental understanding of the causes of inflation, unemployment and economic growth and knowledge to recommend policies in this regard;
- skills to apply the Simple Macroeconomic Model in economic analyses and predictions;
- information gathering and processing skills for writing assignments within the context of micro- and macroeconomics, individually and in groups;

Module code: ECON211	Semester 1	
Title: Macroeconomics		

Module outcomes:
On completing this module you should be able:
- to analyse the interrelationships in macroeconomics between different economic variables in an open economy;
- to evaluate the effect of various policy steps on the functioning of the economy in the long and short run;
- to identify different policy measures to identify macroeconomic problems;
- to explain how these measures may be applied.

Module code: EKRP211	Semester 1	NQF level: 5 b (6)
Title: Introduction to risk management		

Module outcomes:
After completion of this module, the student should be able to:
- demonstrate a clear understanding of what risk entails and how to manage risk strategically in a corporate environment in South Africa;
- explain why risk management plays an important role in the business environment;
- identify and distinguish between various types of risks;
- demonstrate both theoretical knowledge and practical application of the risk management process, i.e. the identification, evaluation and control of risk in a variety of scenarios; and
- demonstrate a clear understanding of the various forms of risk financing strategies, the cost associated with the different strategies and the appropriateness thereof for different risks.

Module code: EKRP311	Semester 1	
Title: Bank Risk Management		

Module outcomes:
On completing this module you should be able:
- to demonstrate a sound and systematic knowledge and understanding of how the Assets and Liabilities Committee (ALCO) manage their assets and liabilities to address banking risks, the role that the management of these financial assets and liabilities play in the South African economy, as well as to address the financial and other related risks in a financial institution;
- to demonstrate well developed skills to solve problems by strategic management of the process of minimising financial risks; of maximising the interest income and equity of financial institutions, and show thorough understanding of the regulatory environment in which banks operate;
- to use individual and group methods to communicate information effectively, coherently and in appropriate format.

Module code: EKRP321	Semester 2	

Title**: Financial Markets**

On completing this module you should be able:

- to demonstrate a well-rounded and systematic knowledge and understanding of the mechanics of the South African Money and Capital Markets, including SAFEX and the Bond Exchange (the Johannesburg Stock Exchange and shares were covered in EKRP211), and demonstrate an understanding of and the ability to use the mechanics of the products and instruments, including derivatives used in these markets and the regulatory environment;
- to demonstrate the ability to work as an analyst, a market dealer, stock broker and back office official in the banking and treasury environment;
- in unfamiliar concrete and abstract scenarios, to apply basic portfolio management using the products and instruments of the above mentioned markets;
- to work in groups and/or as an individual and to communicate information effectively in an ethically sound manner, using appropriate information technology.

Module code: FLGX113	Semester 1	

Title: **Introductory Physiology**

Module outcomes:
On completing the module, the student will have basic knowledge regarding the structural and chemical composition of the human body, the cell structure, different membrane transport systems, homeostatic control systems, enzyme functioning, membrane potentials and cellular communication as a foundation for further studies in Physiology. The student will also be familiar with and be able to use relevant subject terminology.

Module code: FLGX123	Semester 2	

Title: **Membrane and Muscle Physiology**

Module outcomes:
On completing the module, the student must:

- have in-depth knowledge of the biophysical (potential differences, load, current) flow and biochemical character (chemical composition of ion channels, conformation changes of channel proteins, ligand receptor interactions) of membrane physiology;
- have in-depth knowledge of the importance of membrane physiology in controlling physiological functions through change in membrane permeability;
- have basic knowledge regarding cellular communication and information transfer as a necessary foundation for further studies;
- be able to demonstrate fundamental knowledge of the functional anatomy of muscle tissue, the molecular mechanism of contraction, the processes associated with excitation contraction coupling and neuromuscular junction, as well as to discuss applications of these, for example to food poisoning;
- understand and be able to apply the principles of muscle mechanics, for example in using exercise apparatus;
- be able to describe and apply the energy metabolism of muscle contraction, for example in exercise;
- be able to distinguish between skeletal muscle, smooth muscle and heart muscle, and indicate the practical advantages of the differences;
- be able to discuss the control and coordination of motor movement, using effective examples as illustrations;

- demonstrate the ability to identify and analyse the causes and consequences of muscle defects, such as Myastenia Gravis, muscular dystrophy, rigor mortis, hypertrophy and atrophy.

Module code: FLGX213	Semester 1	

Title: **Endocrine System and Digestion**

Module outcomes:

On completing the module , the student must:
- demonstrate knowledge of the properties and functioning of hormones and endocrine glands; demonstrate insight into the chemical classes of hormones using examples, and physiological functions of hormones in every class; be able to apply hormones as chemical messengers in homeostatic control mechanisms; be able to demonstrate fundamental knowledge of hormone synthesis, secretion and the control of secretion, transport, metabolism, mechanisms of hormonal functioning and the hypothalamus-thyroid control system; be able to apply knowledge of endocrinology to explain endocrine abnormalities, such as among others diabetes mellitus and hypo- or hyperthyroidism;
- be able to demonstrate fundamental knowledge of the functional anatomy, design, function and control (neural and hormonal) of the digestive tract and associated organs; be able to demonstrate the ability to identify and analyse the causes and consequences of defects of the digestive tract.

Module code: FLGX223	Semester 2	

Title: **Physiological Defence Mechanisms**

Module outcomes:

On completing the module, the student should:
- know and use the relevant subject terminology, demonstrate an in-depth knowledge of the defence mechanisms of the body, including the role of the skin as the first defence line, the non-specific and specific defence mechanisms of the body, as well as how the body fights the penetration of viruses, bacteria and also the formation of cancer cells;
- have knowledge of the coagulation of blood and the mechanism to limit the loss of blood (blood loss may threaten the survival of the body);
- be able to motivate the value of knowledge of the physiological defence mechanisms for human health and to argue and solve the relevant physiological defence mechanism problems in an integrated way.

Module code: FLGX224	Semester 2	

Title: **Metabolism**

Module outcomes:

On completing the module the student must:
- discuss the role of Adenosinetriphosphate (ATP), energy sources and metabolic tempo;
- be able to draw and explain diagrams and schematic representations of the most important metabolic pathways, such as glycogenesis, glycogenolysis, Krebs Cycle and oxidative phosphorylation;
- be able to communicate aspects of carbohydrate, lipid and protein metabolism;
- to be able to discuss the properties, causes and consequences of metabolic defects, like ketosis and atherosclerosis.

Module code: FSKS111	Semester 1	

Title: **Mechanics, Oscillations, Waves and Theory of Heat**

Module outcomes:

Knowledge:

At the end of this module, students will have formal mathematical knowledge of fundamental concepts like force, work, energy and momentum, elasticity, simple harmonic motion, waves, hydrostatics, hydrodynamics and theory of heat.

Skills:

For the first time, students are introduced to differential and integral calculus in natural science problems, and using these, they will have the skills at the end of the module to describe certain sections of the theory and to solve a variety of problems of the above-mentioned topics. In the accompanying practical sessions, students develop skills in measuring, processing and reporting natural science processes selected from an area wider than Physics only.

Module code: FSKS112	Semester 1	

Title: **Physics for Biology I**

Module outcomes:

This module is a service course for students who do not want to take Physics at the second level or further. At the end of this module, the student have learnt how Physics acts in natural science phenomena that are selected mainly from biological sciences The following topics are covered: kinematics, Newtonian laws of motion, moments, work, energy and power, with applications to the human body, fluid mechanics, pressure, surface tension, diffusion, viscosity, with applications to the flow of blood. In the practical sessions, skills have been acquired in measuring, processing and reporting natural science processes.

Module code: FSKS122	Semester 2	

Title: **Physics for Biology II**

Module outcomes:

Following on FSKN112 this module is a service course for students who do not want to take Physics at the second level or further. At the end of this module, the student will have learnt how physics acts in natural science phenomena. The topics of this module are theory of heat and thermodynamics, electric potential, electric currents and electromagnetic waves, with applications to apparatus used in biological sciences. In the practical sessions, further skills are learnt in measuring, processing and reporting natural processes.

Module code: FSKS121	Semester 2	

Title: **Electricity, Magnetism, Optics, Atomic and Nuclear Physics**

Module outcomes:

Knowledge:

Students acquire a formal mathematical knowledge of electricity and magnetism, optics and topics from atomic and nuclear physics, such as introductory quantum theory, quantum theory of radiation, atomic spectra, X-rays, de Broglie waves and radioactivity.

Skills:

Students develop skills to describe physical processes and natural science problems by means of differential and integral calculus and to solve a variety of problems of the above-mentioned topics. In the accompanying practical sessions, they develop their skills in measuring, processing and reporting on natural science processes.

Module code: FSKS211	Semester 1	

111

Title: **Electricity and Magnetism**

Module outcomes:

Knowledge:

At the end of this module, the students have been introduced comprehensively to the experimental laws of electrostatics and magnetostatics in vacuum and matter, and to introductory electrodynamics.

Skills:

Students learn to apply the laws to a variety of problems by calculating electrostatic potentials and fields and magnetostatic fields. In the practical sessions, they apply new knowledge to measure some of these phenomena, to investigate the laws governing them and to analyse and present their results and reports by means of computer methods.

Module code: **FSKS212**	Semester 1	

Title: **Optics**

Module outcomes:

Knowledge:

At the end of this module, students will have acquired a formal mathematical knowledge of optics by having studied the topics of wave theory, interference, diffraction and polarisation of light, as well as laser physics.

Skills:

In the accompanying practical sessions, students describe and measure a number of concepts and phenomena from geometrical optics, and they investigate certain laws governing these phenomena. They do this amongst others by means of the optical telescope at Nooitgedacht. They use graphical modelling and presentation of the data to deliver a computerised report on their observations.

Module code: **FSKS221**	Semester 2	

Title: **Special Relativity**

Module outcomes:

Knowledge:

At the end of this module students have acquired a good insight into the meaning and historical development of the special relativity theory by having studied the nature and consequences of the Michelson-Morley experiment, why and in what way the Lorentz transformations were introduced, and how Einstein interpreted and used these in terms of his two postulates of special relativity. Students also have been introduced to the concepts and application of length contraction, time dilatation, Minkowski's space-time intervals, spectral shifts, Hubble's law, relativistic energy and its four-vector applications.

Skills:

In the theory, the emphasis is on formal and conceptual knowledge and applications. In the accompanying practical sessions, the emphasis is on the correct written and oral presentation of experimental results and project reports. Using computer graphic software and word processing are learnt.

Module code: **FSKS222**	Semester 2	

Title: **Introductory Quantum Physics**

Module outcomes:

Knowledge:

At the end of this module, students have been introduced to the extension of classical physics for the first time by having been exposed to energy quantisation for a few phenomena with reference to Planck's postulate. The phenomena include blackbodies, the photoelectric effect, the Compton Effect and X-rays. Students also

have been exposed to Bohr's quantisation principles to develop the first workable model for the hydrogen atom.

Skills:

In the practical sessions, a few quantum mechanical phenomena are investigated. Specialised computer software is used for presenting data in a computerised report.

Module code: FSKS311	Semester 1	

Title: **Electromagnetism**

Module outcomes:

Knowledge:

In this module, which follows on FSKS211, the Maxwell equations are derived for vacuum and matter. By means of these equations, all electromagnetic phenomena can be described and explained mathematically. Students master solutions to these equations in vacuum, non-conductors and conductors, including wave-guides and optical fibres.

Skills:

In the practical sessions, some of these aspects are investigated experimentally. Students learn, for example, how to use an oscilloscope and other basic measuring apparatus.

Module code: FSKS312	Semester 1	

Title: **Wave Mechanics**

Module outcomes:

Knowledge:

At the end of this module, students have been introduced to the first principles of quantum physics in the form of wave mechanics as replacement of Newtonian mechanics.

Skills:

Students learn to do basic quantum mechanical calculations and to solve applicable differential equations. In the practical sessions, they study quantum mechanical phenomena and report on these by means of computerised reports and oral presentations.

Module code: FSKS321	Semester 2	

Title: **Thermodynamics**

Module outcomes:

Knowledge:

After the introduction in FSKS111, students receive formal education in the following topics: the zeroth, first, second and third laws of thermodynamics. The concepts entropy, Tds-equations, Helmholtz and Gibbs functions, potential functions, equilibrium and phase transitions are introduced by a simple statistical description of an isolated system with emphasis on the example of an ideal gas.

Skills:

Students learn how to develop and present abstract theory and to apply thermodynamic principles to systems, like the atmosphere, and to certain cyclic processes, like those of heat engines and refrigerators. Great emphasis is placed on problem solving as the outstanding method to apply physics practically. In the practical sessions accurate measurements are made on alternate stars, students learn how to measure heat capacity and they gain experience in applying their thermodynamic knowledge to astrophysical problems.

Module code: FSKS322	Semester 2	

Title: **Nuclear Physics and Elementary Particles**

Module outcomes:

Knowledge:

The course follows directly on FSKS312, which deals with introductory wave mechanics. At the end of FSKS322 students have knowledge of nuclear structures and reactions, nuclear decay and models, nuclear models, groups of elementary particles, laws of conservation and the standard quark model for elementary particles.

Skills:

In the theory, emphasis is placed on formal and conceptual knowledge and applications thereof. In the practical sessions, a talk on a popular topic is required, and projects on the contents of the course are discussed. Great emphasis is placed on the correct written and oral presentation of project reports. The use of computer graphic software and word processing is learnt.

Module code: FSKS323	Semester 2	

Title: **Astro- and Space Physics**

Module outcomes:

Knowledge:

At the end of this course, students have been introduced to distances, positions, motion, clarity, temperature, mass and colour of stars and the significance of these properties. Further topics are the Sun and heliosphere as prototype, magnetic field of stars and planets, pulsating stars and stellar explosions. Also of importance is the motions and acceleration of charged particles in astrospheres, as well as in astrophysical shocks.

Skills:

In the practical sessions, skills are acquired in photometric and spectral measurements with the optical telescope at Nooitgedacht.

Module code: GGFS111	Semester 1	

Title**: Introductory Physical Geography**

On completing the module the student should be able to demonstrate fundamental knowledge and insight into the macromorphology of the earth, biogeographical regions, climatological aspects and processes, soils, as well as the human impact on the mentioned earth systems; the ability to carry out cartographic operations, such as mapping of direction, scale, distance, surface area, reference system, contours and the interpretation of contours; to draw diagrammatic representations of data; to identify geographical problems at a higher cognitive levels and to present the holistic image of the earth in proposed solutions to problems; to appreciate and apply the integrated nature of environmental management; to embrace an attitude of conservation towards creation and be intent on sustainable management of the earth.

Module code: GGFS121	Semester 2	

Title**: Introductory Human Geography**

On completing the module, the student should be able to demonstrate fundamental knowledge and insight into different political systems, the economic-geographical relations between the RSA and its neighbouring countries, aspects of demography, amongst others population growth, the South African population situation, the influence of population distribution on economic development, economic activities and systems, spatial interaction (potential model and gravitation model), types of transport; world urbanisation tendencies, the factors that influence the growth and location of urban settlements and different models of urban structure; to demonstrate skills by carrying out statistical operations with geographical data and presenting the results diagrammatically, as well as by interpreting them spatially; the ability to identify problems at higher cognitive levels and to present a holistic image of the earth in proposed solutions to problems, to appreciate and apply the integrated nature of environmental management and to embrace an attitude of conservation towards creation.

Module code: GGFS211	Semester 1	

Title: **Economic Geography and Applied Climatology**

On completing the module, the student should demonstrate thorough knowledge and insight into South African stratigraphy, the theory of diffusion, different classes of economic activities and theories thereof, an adiabatic map, the role of climate in agriculture, tourism and housing, weather and climatic modification, weather patterns and the relationship between climate and pollution; demonstrate skills by carrying out weather measurements and processing and evaluating the data; by constructing and interpreting tephigrams and performing and interpreting computer-assisted statistical operations; demonstrate the ability to undertake literature searches, to analyse, interpret and synthesise information for use in solving and evaluating problems in a known context.

Module code: GGFS221	Semester 2	

Title**: Applied Geomorphology and Climate Change**

On completing the module, the student should be able to demonstrate knowledge and insight into: soils (clay minerals) that are subject to expansion and contraction, the process of mass landslides of weathering waste and rock material and the factors that control slope stability; the ability to identify, conduct research into and communicate possible written and oral solutions to the dangers of the process of mass movement of weathering waste and rock material, and investigate the factors that control slope stability as well; to demonstrate skills in identifying and evaluating climatic modification and disturbances, and in carrying out measurements of slope profiles, current channels and profiles, as well as current flow, and

in giving a description of the soil profile; to demonstrate the ability to read and interpret single photos and stereophotos; to demonstrate the ability to present a holistic image of the earth in all assessments; to appreciate and apply the integrated nature of environmental management in all projects, to embrace an attitude of conservation towards the earth and to be intent on sustainable management of creation.

Module code: GGFS311	Semester 1	

Title: **Geographical Information Systems**

On completing the module, the student should have a well-rounded and systematic knowledge and insight into the different data entities found in GIS, and to relate them to spatial issues in geography and other subject groups; demonstrate skills in collecting, managing and applying basic analyses to geographical data by making use of appropriate GIS software; demonstrate the ability to generate high quality and meaningful maps and reports; the ability to identify and characterise spatial problems and conduct research into relevant literature; and as an individual or as a member of a group, the ability to communicate possible solutions in writing and orally in an ethical and responsible way.

Module code: GGFS321	Semester 2	

Title: **Environmental Geography**

On completing the module, the student should be able to demonstrate well-rounded and systematic knowledge and insight into (i) different water quality parameters, (ii) quartz aquifers and the influence of mining activities on them; (iii) 'Condition of the Earth'; (iv) environmental influences associated with cities, industries, power supply, mining, agriculture and recreation; to demonstrate skills in taking water samples, making field assessments of water quality and interpreting results, determining instrument-specific margins of error and designing monitoring programmes; the ability to identify problems in the field of geography and environmental management; the ability to undertake appropriate literature searches, collect and interpret data, analyse, evaluate and synthesise information and come to a meaningful conclusion; the ability to write a research proposal that complies with all scientific requirements, conduct research under strong guidance and to present results in a research project report.

SUBJECT GROUP: GEOLOGY

Module code: GLGN112	Semester 1	

Title: **Geology and the Environment**

On completing the module, the student should be able to demonstrate a fundamental knowledge and informed insight into the internal and external geoprocesses; to have the ability to describe and identify the most common rock-forming minerals and rocks; to demonstrate the ability to communicate in writing and orally points of view and solutions regarding certain earth issues, such as global warming, exploitation of irreclaimable natural resources and pollution because of mining activities; to demonstrate development of skills in identifying, analysing and driven by theoretical arguments proposing solutions to geological problems or potential problems; to demonstrate an awareness of ethics connected to geology, as in the case of exploitation of mineral sediments at the expense of conservation of geo- and biodiversity.

Module code: GLGN122	Semester 2	

Title: **South African Geology**

On completing the module, the student should be able to demonstrate (a) a fundamental knowledge of the geological time scale and basic insight into the concept of geological time; (b) fundamental knowledge of stratigraphic principles and the different types of stratigraphic correlations; (c) fundamental knowledge of the primary South African stratigraphic units; the ability to interpret and understand geological development and structure in three dimensions; to demonstrate an insight into the issue of certain areas in South Africa being described as problem areas because of detrimental environmental impacts caused by human activities and the probable accompanying ethical aspects.

Module code: GLGN211	Semester 1	

Title**: Mineralogy en Igneous Petrology**

On completing the module, the student should (a) have a thorough knowledge and extensive understanding of a variety of rock-forming and economic minerals and (b) a variety of igneous rock associations and the accompanying rock-forming processes; (c) have an in-depth knowledge of chemical analyses of minerals and rocks; (d) have acquired a systematic review of the most important igneous rock associations; have the ability to critically analyse and synthesise tendencies in compositional changes of minerals and rocks.

Module code: GLGN221	Semester 2	

Title**: Sedimentology, Structural Geology and Neotectonics**

On completing the module, the student should be able to demonstrate thorough knowledge of the principles of structural geology; to demonstrate thorough knowledge of the general principles of deformation in brittle and ductile rocks and of the description of structures; to demonstrate thorough knowledge of sedimentology; to demonstrate knowledge of the South African stratigraphy; to demonstrate an understanding of how the subjacent structure and sedimentological properties of an area may give rise to problem areas and ethical issues.

Module code: GLGN311	Semester 1	

Title: **Metamorphic Petrology and Geochemistry**

On completing the module, the student should have well-rounded and systematic knowledge and coherent and critical understanding of the petrologic processes and products of metamorphosis; have acquired a systematic review of metamorphic fasies; have well-rounded and systematic knowledge and coherent and critical understanding of basic geochemical principles, their application and the distribution and movement of chemical elements in the geosystem.

Module code: GLGN321	Semester 2	

Title**: Hydrogeology**

On completing the module, the student should be able to demonstrate a well-rounded and systematic knowledge of the principles of hydrogeology and related ethical principles; and to demonstrate a well-rounded and systematic knowledge of the general geophysical principles as applicable to hydrogeology.

Module code: GDKN121	**Semester 2**	

Title: **Introduction to Soil Science**

On completing the module, the student should have a basic understanding and knowledge of fundamental concepts in soil science; know and understand the different soil components and understand and be able to define the interaction between the components; be able to name, circumscribe and illustrate using examples the processes of soil genesis and soil-forming; be able to differentiate, identify and classify soil horizons, especially in the context of South African soils.

Module code: GDKN211	**Semester 1**	

Title: **Advanced Soil Science**

On completing the module, the student should know and understand geotechnical classification systems; know and explain the structure of primary and secondary minerals and be able to explain and define weathering products and interactions; to explain how soil reacts to mechanical forces, as well as to explain and illustrate soil-mechanical concepts and applications; to know and understand physical interaction between solid particles, water, organic material and earth gases; to understand and explain chemical reactions that take place in soils; to describe the different microbiological organisms and their contribution in soils; to explain and apply procedures of soil sampling; to understand and explain the theory of analytical analysis procedures; to know and understand the principles of manuring recommendations; to apply the principles of management, presentation and interpretation of information collected.

Module code: GDKN221	**Semester 2**	

Title**: Soil Degradation and Rehabilitation**

On completing the module, the student should be able to distinguish between natural and anthropogenetic soil degradation with regard to the origin and factors that lead to soil degradation; to identify pollution of soil on the basis of physical and chemical analyses in order to determine him-/herself which types of analyses are applicable in the case of field investigations; to explain what the influence of pollution and degradation is on the chemical, physical and mechanical properties and general uses of soil; to use remote sensing techniques to spot and identify soil degradation; propose remedial measures to counteract, prevent and remedy degradation; to identify implications of soil degradation and pollution in field context and to identify or develop potential rehabilitation programmes; to develop sustainable soil use management systems; to develop environmental risk analyses for different uses of soil; to carry out practical soil surveys in the field with emphasis on identifying soil degradation and pollution, and risk management.

Module code: ITRW112	**Semester 1**	

Title: **Introduction to Computers and Programming**

Module outcomes:

On completing this module, the students should be able to demonstrate fundamental knowledge of the different components of a computer and an information system, as well as programming languages and their uses. Furthermore, the student should be able to demonstrate the manipulation of spreadsheets by applying knowledge of tables, computations, transfer of data between different applications, functions and graphic presentations; to demonstrate the ability to solve problems by designing and implementing structured programming, by using data manipulation and data presentations and applying 'GUI' event-driven approaches in the development environment of a spreadsheet; to demonstrate insight into ethical issues related to the wider IT business and an awareness of the risks and dangers that threaten the business; to demonstrate the ability to communicate

in writing by compiling a report after having completed a project.

Module code: ITRW123	Semester 2	

Title: **Graphic Interface Programming I**

Module outcomes:
On completing the module, the student should demonstrate knowledge to be able to write a computer program that requires certain fundamental theoretical prescience have been mastered; demonstrate the ability to solve simple problems by applying fundamental theoretical prescience; demonstrate sufficient fundamental knowledge of and insight into the graphic interface environment to develop computerised systems in a visual object-based computer language; demonstrate the ability to implement repetitive, conditional and sequential structures, as well as aspects like graphic interface design, event-driven programming, procedural and object-based programming.

Module code: ITRW124	Semester 2	

Title: **Programming I**

Module outcomes:
On completing this module the student should be able to demonstrate fundamental knowledge of the basic structures, data types, methods, classes and objects of an object-based programming language, and their use; to demonstrate the ability to solve unknown problems by designing and implementing object-based programming, debugging, testing and carrying out applications; to demonstrate insight into ethical issues that are related to the wider IT business and to be aware of the risks and dangers that threaten the business.

Module code: ITRW212	Semester 1	

Title: **Programming II**

Module outcomes:
On completing this module students should have the ability to demonstrate an in-depth knowledge of search, sorting and recursive methods, as well as the use of an object-based programming language and concepts to solve basic problems; to apply in-depth knowledge of other numeric systems, like the binary numeric system, in order to carry out basic computations; to demonstrate skills in solving problems that require file management and exception handling by means of an object-based programming language; to demonstrate the ability to identify, analyse and solve problems by writing a structured, object-based program.

Module code: ITRW214	Semester 1	

Title: **Decision support systems I**

Module outcomes:
At the end of this module the student ought to have acquired basic knowledge and insight into:
decision-making, construction of decision-making systems, formulating simple linear models (break-even analysis, linear programming) and their solution with the aid of spreadsheets;
carrying out sensitivity analysis and solving specific problems (transportation and assignment problems and networks). The above techniques will be used in modelling and solving simple operational problems.

119

Module code: ITRW222	Semester 2	

Title: **Data Structures and Algorithms**

Module outcomes:
On completing this module successfully, students should be able to demonstrate in-depth knowledge and understanding of data structures (vectors, matrices, switched lists, stacks and queues) and the complexity of algorithms by setting up and manipulating data structures, to use object-orientated methods to create abstract data types for the above mentioned data structures and to solve different data handling problems.

Module code: ITRW311	Semester 1	

Title: **Databases I**

Module outcomes:
On completing the module, the student should be able to demonstrate well-rounded and systematic knowledge and insight into entity relationship modelling; normalising of database tables and the ability to write and apply SQL and PL/SQL expressions and procedures in designing databases and retrieving information in order to solve unfamiliar concrete and abstract problems in the database environment.

Module code: ITRW316	Semester 1	

Title: **Operating Systems**

Module outcomes:
On completing this module, the student should be able to demonstrate well-rounded and systematic knowledge of and insight into the principles according to which operating systems work, as well as the ways in which they are implemented; to demonstrate the ability to install operating systems on a computer; to demonstrate the ability to use Linux instructions and utility programs in carrying out assignments.

Module code: ITRW321	Semester 2	

Title: **Databases II**

Module outcomes:
On completing this module, the student should have a well-rounded and systematic knowledge and insight into transaction management; should have the ability to apply control of simultaneous use, distributed database management systems and database administration to the administration of databases in order to solve, as an individual and as a member of a group, unfamiliar concrete and abstract computer problems in the database environment.

Module code: ITRW322	Semester 2	

Title: **Computer Networks**

Module outcomes:
On completing this module students should be able to demonstrate well-rounded and systematic knowledge and insight into the operation of examples of networks, different frames of reference for networks, as well as the network protocols that play a role at the different levels of the frames of reference; to complete, as an individual and as a member of a group, a project that has basic network capabilities.

SUBJECT GROUP: MICROBIOLOGY

Module code: MKBN211	Semester 1	

Title: **Introductory Microbiology**

On completing the module the student should be able to demonstrate thorough knowledge and insight into Microbiology as science, electron microscopy, prokaryotic and eukaryotic cells, nutrients and micro-organisms, fermentation processes and a theoretical insight into monokinetics, the growth and reproduction of micro-organisms, as well as the influence of abiotic factors thereon, and the structural and physiological adaptations of different groups of bacteria; to demonstrate skills, as an individual and as member of a group, to use differently formulated culture mediums/methods to isolate a variety of micro-organisms from different environments, as well as to use aseptic techniques to sustain micro-organisms in pure cultures in the laboratory; to demonstrate skills in identifying micro-organisms on the basis of morphological, physiological and molecular properties, and in controlling them with physical methods and chemical preparations and the mortality of micro-organisms, and in communicating findings to peers in written reports and orally.

Module code: MKBS221	Semester 2	

Title**: Introductory Microbial Genetics, Virology and Immunology**

On completing the module the student should demonstrate thorough knowledge and insight into selected aspects of microbial genetics, virology and immunology; demonstrate skills in the use of antibody tests to determine blood groups and the presence of viruses; the ability, as an individual and as member of a group, to demonstrate the isolation and characterisation of genomic and plasmid DNA, proteins and RNA, and the transfer of genetic material by transformation and transduction; the ability to communicate findings to peers in written reports and orally.

Module code: MKBS323	Semester 1	

Title: **Microbial Ecology**

On completing the module the student should demonstrate a well-rounded knowledge and insight into the principles of microbial ecology and the interaction between micro-organisms and the biotic and abiotic environment; demonstrate skills in applying more than the basic laboratory techniques and procedures; competency in identifying and analysing microbial ecological problems in industry and in solving them ethically and effectively, using suitable techniques, processes and procedures; demonstrate the ability as an individual and as member of a group to obtain and process information by means of cognitive and experimental research and to communicate findings to peers in written reports and orally.

Module code: MKBS324	Semester 1	

Title: **Microbial Diversity**

On completing the module the student should demonstrate a well-rounded knowledge of and insight into microbial diversity; the ability to use Bergey's Manual to organise bacterial diversity and to compile useful data for the identification of bacterial species; the ability as an individual and as member of a group to undertake information searches and to analyse, evaluate and digest existing research literature in order to document findings in evidence-based reports and to communicate them orally to peers and professional persons by means of suitable IT.

Module code: MKBS313	Semester 2	
Title: **Microbial Physiology**		
On completing the module the student should be able to demonstrate a well-rounded knowledge and insight into microbial metabolism and physiology; to demonstrate the use of suitable resources to research ecological, industrial and diagnostic applications of microbial metabolism and to analyse and interpret them and to communicate findings; to demonstrate the ability as an individual and/or as member of a group to identify, describe and characterise microbial metabolism; to demonstrate the ability to research relevant literature and communicate findings to peers in written reports and orally.		

Module code: MKBS314	Semester 2	
Title: **Recombinant DNA Technology and Industrial Microbiology**		
On completing the module the student should be able to demonstrate a well-rounded knowledge and insight into recombinant DNA-technology in industrial microbiology; to demonstrate skills as an individual and/or as member of a group to undertake and complete laboratory projects; to demonstrate the ability to evaluate the implications and ethical aspects involved in the use of micro-organisms and recombinant DNA technology in different industrial processes, and to communicate findings to peers in written reports and orally.		

SUBJECT GROUP: BOTANY

Module code: PLKS111	Semester 1	
Title: **Plant Structure – Cytology, Morphology and Anatomy**		
On completing the module the student should be able to demonstrate fundamental knowledge of plant structures, cytology and morphology in order to understand the importance of plants to sustain life on earth, the unique structure and properties of plants and their interaction with other organisms, and to relate these to the survival of plants and their interaction with other organisms; to demonstrate skills in preparing plant material for micro- and macroscopic analysis, and using the compound light microscope to draw scientific acceptable sketches of macro- and microscopic structures of plants.		

Module code: PLKS121	Semester 2	
Title**: Biodiversity and Environmental Botany**		
On completing the module the student should be able to demonstrate fundamental knowledge of (i) the pre- and post-Darwinian classification systems, (ii) the principal evolutionary mechanisms; (iii) the possible evolutionary origin of species; (iv) the morphology and propagation of main groups of non-vascular plants, seedless vascular plants and gymnosperms, as well as the biotic composition of ecosystems; demonstrate skills tin using the compound light microscope to identify organisms and to make accurate drawings of them; demonstrate the ability as an individual and as member of a group to identify and investigate the human impact on ecosystems, amongst others environmental problems such as water pollution, land degradation and increasing urbanisation, by researching scientific information, analysing and integrating information, and by communicating findings to peers in an ethically responsible way in written reports and orally.		

Module code: PLKN212	Semester 1	

Title: **Plant Water Relations: Structure and Function (Anatomy and Ecophysiology)**

On completing the module the student should be able to demonstrate fundamental knowledge of and insight into: (i) the importance of plants to sustain life on earth and of plant-physiology as topic to ensure food stability; (ii) the dynamic and analytical character of plant structures; (iii) the structure and function of organelles in eukaryotic cells; (iv) the structure and function of primary plant tissue; (v) the structure and function of primary and secondary plant organs, with emphasis on a) the absorption and transport of water in plants, b) nutritional needs and the absorption of nutrients, c) the transport photoassimilate and source/receiver relations in plants, and d) the structure and function of reproductive organs; should be able to write essays to demonstrate the ability to read, understand and integrate scientific information.

Module code: PLKS221	Semester 2	

Title: **Flora of South Africa (Plant Systematics and Phytogeography)**

On completing the module the student should be able to demonstrate fundamental botanical knowledge and insight into: (i) the historical development, importance and essence of systematics, (ii) the meaningfulness of biodiversity studies and the uniqueness of South African flora, (iii) resources of variation in characteristics and use of these resources in classification systems, especially from a phylogenetic viewpoint, (iv) the basic principles of phytogeography and its patterns in South Africa, (v) the identification processes and principles to identify flower plant families, (vi) the rules that underlie plant nomenclature, and (vii) the practices followed in a herbarium and during plant collection; to demonstrate skills in the use of the necessary equipment to collect, press, dry, and mount plants and integrate them into the herbarium; to demonstrate the ability to compile and use a dichotomous key; to demonstrate the skills in using a stereomicroscope and dissection set to dissect flowers and to compile flower- diagrams and formulas; to have the ability to apply mathematical concepts in the analysis of diversity patterns; to demonstrate skills to analyse a data matrix and to represent it as an appropriate and representative cladogram; to demonstrate competency as an individual to investigate the taxonomy of a plant species by researching, analysing and integrating relevant scientific information, and to communicate findings creatively to peers in written reports and orally; to investigate, as a member of a group, biodiversity crises by researching, analysing and integrating relevant scientific information, and by communicating findings to peers in a ethically responsible manner in written reports and orally.

Module code: PLKS311	Semester 1	

Title: **Plant Physiology: Energy Conversion and Metabolism**

On completing the module the student should be able to demonstrate a well-rounded and systematic knowledge of the following: (i) energy conversion in living organisms, as well as the nature and dual role of sunlight, namely energy and information, (ii) the photobiology involved during the absorption of light energy, (iii) the construction and functioning of the photosynthesis apparatus in the thylakoids, as well as the control thereof and the mechanism to protect it against excessive light, (iv) the assimilation of CO_2 by the Calvin cycle, and the physiology and biochemistry of photorespiration, (v) the controlled transport of photoassimilate from the chloroplast; (vi) the physiology and unlocking of energy stored in the assimilate and (vii) the biology of symbiotic hydrogen assimilation; demonstrate skills to (i) to demonstrate skills in studying the influence of environmental factors on the physiology of plants; (ii) in measuring the influence of environmental factors on various plant physiological and biochemical processes; (iii) in understanding the integration of plant processes and in interpreting data; to demonstrate the ability to identify plant physiological

problems; to research, analyse and integrate relevant scientific information, and to communicate findings to peers in a ethically responsible manner in written reports and orally.

Module code: PLKN323	Semester 2	

Title: **Plant Ecology**

On completing the module the student should be able to demonstrate a well-rounded and systematic knowledge of: (i) concepts and interactions of ecological processes and plant growth dynamics in terrestrial ecosystems, (ii) functioning and use of inland aquatic environments (dams and rivers), especially with reference to the occurrence of different algae, as well as the physical, biological and chemical impact thereof on these systems, (iii) how algae, micro- and macrophytes are adapted to different habitats and the problems it causes in the use of water and the water purification; to demonstrate skills to apply the principles of landscape ecology and plant growth diversity, by using different plant growth surveying and multivariable data processing techniques; to demonstrate the ability to identify plant ecological problems and research, analyse and integrate relevant scientific information and data collected, and to communicate findings to peers in a ethically responsible manner in written reports and orally. A research project must be completed under the supervision of a study leader during the year. The mark for this project will contribute towards the participation mark for this module.

Module code: PLTN323	Semester 2	

Title: **Plant Ecology: Tourism**

On completing the module the student should be able to apply basic ecological principles; to discuss ecological interactions and examples thereof; to understand and apply basic principles with regard to plant growth dynamics and landscape ecology; to discuss resource conservation and utilisation, and the influence of aspects such as ecosystem management, degradation, restoration and rehabilitation, and urbanisation on resource conservation and utilisation, as specific case studies, also in the tourism industry; to integrate knowledge of the influence people and changing environmental conditions have on ecosystems; to master various data collecting techniques and apply multiple data analytical procedures on environmental data; to explain the water situation over a wide range in South Africa and the importance of utilising inland water as a limited resource, as well as to discuss the influence of human beings on water quality and the utilisation of inland waters, also in the tourism industry. A research project must be completed under the supervision of a study leader this year. The mark for this project will contribute towards the participation mark for this module.

SUBJECT GROUP: URBAN AND REGIONAL PLANNING

Module code: SBES111	Semester 1	

History of Civilizations

On completing the module, the student should be able to demonstrate fundamental knowledge and insight into the settlement, origin and development of cities of different historical civilizations; to demonstrate skills, an individual and as a member of a group, in collecting, reading, interpreting, synthesising and presenting scientific information orally/in writing; the ability to act ethically in presenting his/her knowledge of the historical facts of planning cities and regions.

Module code: SBES121	Semester 2	

Title: **Urban Morphology**

On completing the module, the student should be able to demonstrate fundamental knowledge and insight into the implementation of the different manifestations of garden

cities, as well as the ability to evaluate their value and impact; to demonstrate fundamental knowledge and understanding of the different modern and post-modern models, including those that apply to South Africa; to demonstrate skills, as an individual and as a member of a group, in collecting, reading, interpreting, synthesising and presenting appropriate scientific information orally/in writing; the ability to act ethically in presenting his/her knowledge of historical facts in planning cities and regions.

Module code: SBRL211	Semester 1	

Title: **The Planning Space, Cities and their Regions**

On completing the module, the student should be able to demonstrate in-depth knowledge and insight into the nature and characteristics of forces that determine urban morphology; to demonstrate skills in distinguishing independently underlying relations between forces that determine the forms and morphology of cities and regions; and, with a view to develop a project on spatial systems, to demonstrate skills, as an individual and as a member of a group, in identifying and applying forces that dictate urban settlement patterns and forces that lead to the establishment and development of service areas.

Module code: SBSL212	Semester 1	

Title: **Planning Layout and Design**

On completing the module, the student should be able to demonstrate in-depth knowledge and informed understanding of different types of layout, the layout process and qualitative and quantitative principles of planning layout and design, and to demonstrate the ability to apply this knowledge and understanding in analysing, evaluating and improving specific sites and layouts; to demonstrate the ability, as an individual and as member of a group, to analyse unfamiliar and somewhat complex problems of layout and design, to identify variables and formulate proposals to solve the problem/problems; to demonstrate the ability to communicate information and proposals regarding design orally, in writing and by means of drawing techniques in a coherent and trustworthy manner, using information technology where appropriate; to demonstrate the ability to approach layouts and design in an ethical and responsible manner, taking into consideration the specific needs of the community and the necessity of environmental conservation.

Module code: SBSL221	Semester 2	

Title: **Urban Design**

On completing the module, the student should be able to demonstrate an in-depth knowledge and informed understanding of basic principles of urban design, the origin of urban design, what it comprises, paradigm shifts in urban design theory and the challenges posed to urban design by the development of cities; to demonstrate the ability to find creative solutions to existing or new urban spaces by means of urban design precedents in order to transform these spaces into quality places for people, taking into consideration the environment; to demonstrate the ability to discover creative design solutions, independently as an individual and in close association with a group, and to communicate these solutions visually and orally to an audience.

Module code: SBRL251	Semester 2	

Title: **Regional Plans and Formation of Metropolises**

On completing the module, the student should be able to demonstrate in-depth knowledge and understanding of the different regional planning approaches in the world, of the physical and socio-economic characteristics and requirements of metropolises and world cities, and of the processes that led to the formation of structural elements in metropolises and regions; to demonstrate skills, as an individual and in close association with a group, to apply planning policy and instruments in solving well-formulated, but unfamiliar

problems regarding metropolitan formation; to demonstrate the ability to conduct research, to collect and interpret appropriate information and present it in the form of a report.

Module code: SBRL261	Semester 2	

Title**: The Location of Enterprises**

On completing the module, the student should be able to demonstrate in-depth knowledge and understanding of forces that play a role in the establishment of businesses in and between cities in the urban system; to demonstrate skills in passing a balanced and ethical judgment on the necessity and desirability of locating commercial and industrial land uses within urban space; to demonstrate the ability to identify, analyse and propose solutions to problems regarding the viability of businesses within the economic space of cities and urban systems; to demonstrate the ability to evaluate these proposals and to propose and apply improvements based on scientific and ethical principles; to demonstrate, as an individual or as a member of a group, the ability to communicate solutions in writing and orally.

Module code: SBRL311	Semester 1	

Title: **The Economic Development of Regions**

On completing the module, the student should be able to demonstrate well-rounded knowledge and understanding of objectives of regional development in a regionally balanced and regionally unbalanced context; of the anatomy of the formal and informal urban economic urban sectors and the "top-down" and "bottom-up" development processes in local economic development; to demonstrate the ability, as an individual and as member of a group, to identify problems in economic development of regions, retrieve existing research on these problems, to analyse and evaluate them, and to explain the results of his/her/their findings orally and in written format at a seminar.

Module code: SBRL351	Semester 2	

Title**: Regional Analysis Techniques**

On completing the module, the student should be able: to demonstrate well-rounded and systematic knowledge and understanding of urban systems and planning approaches to regional systems in developed and developing countries; to demonstrate skills in determining scientifically the order of cities in a region; to apply, as an individual or in a group, regional analytical techniques to identify problems, to make calculations and to suggest creative solutions and to communicate solutions in writing and orally to an audience of peers.

Module code: SBRL361	Semester 2	

Title: **Spatial Characteristics and Dynamics of Regions**

On completing the module, the student should be able: to demonstrate well-rounded and systematic knowledge and understanding of the nature, characteristics and diversity of regions and the role of economic, physical and social processes in the formation of regions and in regional planning; to demonstrate skills in applying classification systems in the demarcation of regions; to demonstrate the ability to identify problems in the classification and formation of regions in South Africa and to propose possible solutions.

Module code: SBSL311	Semester 1	

Title: **Transportation Planning**

On completing the module, the student should be able to demonstrate well-rounded and systematic knowledge of intracity transportation and the resulting flow of traffic; to demonstrate the process of traffic planning and the relevant planning principles, as well as the Integrated Transport Plan; to demonstrate skills in applying the planning principles

maintained in planning the network component of the urban traffic system tin order to solve transport problems identified; to demonstrate the ability to identify and analyse traffic problems at national, provincial and municipal level and to do traffic planning on the basis of applicable planning principles, and to draw up these plans using a computer, to submit a business plan, evaluate the plans and improve them; to demonstrate the ability to submit, as an individual or in group context, solutions in an ethical and responsible manner to an audience of peers and professional people.

Module code: SBSL321	Semester 2	

Title: **Industrial and Commercial Planning**

On completing the module, the student should be able to demonstrate well-rounded and systematic knowledge and understanding of types of industrial areas, hierarchal structure of retail trade in a town/city, policy regarding the informal trade sector, planning principles concerning different kinds of shopping centres, office spaces and wholesale businesses; to demonstrate skills, as an individual or as member of a group, in proposing development of industrial parks on the basis of the planning needs and principles relevant to businesses that settle in industrial parks; to demonstrate knowledge of the planning principles of the semi- and full mall, retail trader, informal trade sector, shopping centres and office spaces; to demonstrate the ability, as an individual or as member of a group, to identify and analyse problems in industrial and trade planning, to undertake the necessary research, collect, analyse and apply information in order to propose solutions that are ethically and scientifically sound; to demonstrate the ability to present planning proposals in report and oral format at a seminar with the aid of suitable IT.

Module code: SBES321	Semester 2	

Title: **Engineering for Planning**

On completing the module, the student should be able to demonstrate knowledge and understanding of policy and legislation that guide engineering services; to demonstrate skills in undertaking the planning of engineering services such as water supply, sewage systems, electricity supply and designing streets for vehicles, bicycles and pedestrians in town layouts; to demonstrate the ability to do cost accounting based on the theoretical knowledge acquired in the module; to demonstrate the development of the ability, as an individual or as a member of a team, to undertake the provision and planning of engineering services in town layouts and development, to gather, analyse, evaluate, and synthesise information with a view to formulate practical proposals to ensure the cost effectiveness and functionality in planning of project; to demonstrate the ability to write a report on practical, integrated planning and design of engineering services and to communicate it to those concerned.

Module code: SBRL431	Semester 1	

Title: **Migration, Globalisation and Urban Development in the World**

On completing the module, the student should be able to demonstrate knowledge and understanding of the influence of globalisation on the urban environment in the developed and developing world; to demonstrate skills in applying theory and theoretical principles in practice to solve unfamiliar problems regarding migration and urban development in a global context; to research the causes and implications of migration and urban development as found in different situations in a global context, to analyse and interpret information and present proposals based on applicable theories and principles with a view to sustainable development in an economic and social context.

Module code: SBES471	Semester 1 & 2	

Title: **Planning Project**

On completing the module, the student should be able to demonstrate knowledge and understanding of the influence of globalisation on the urban environment in the developed and developing world; to demonstrate skills to apply theory and theoretical principles in practice to solve unfamiliar problems regarding migration and urban development in a global context; to research the causes and implications of migration and urban development as found in different situations in a global context, to analyse and interpret information and present proposals based on applicable theories and principles with a view to sustainable development in an economic and social context.

Module code: SBSS411	Semester 1	

Title: **Strategic Spatial Planning**

On completing the module, the student should be: able to demonstrate extensive and systematic knowledge of the role of planning policy and housing policy in modernistic and post-modernistic spatial planning; to demonstrate skills to understand and solve real-life problems in socio-economic development by applying fundamental theories and principles of strategic and spatial planning; to demonstrate skills in researching the impact of policy changes from a development perspective, in interpreting and analysing findings and in facilitating changes.

Module code: SBSL412	Semester 1	

Title: **Land Use Management and Residential Development**

On completing the module, the student should be able to demonstrate extensive and systematic knowledge of residential types and the development thereof, the principles and processes of statutory planning that includes zoning and management of land use; to demonstrate the ability to explain and discuss subdivision of land and town establishment; to demonstrate skills in using planning instruments to undertake spatial residential development and land management in a professional and ethical manner; to demonstrate the ability to plan a quality residential development and promote sustainable land use; to demonstrate the ability to promote urban density by researching residential development within the framework of differentiation and affordability; to demonstrate the ability to process and interpret information, and to propose sustainable development orally and in writing.

Module code: SBRL441	Semester 1	

Title: **Application of Regional Planning in South Africa**

On completing the module, the student should be able to demonstrate extensive and systematic knowledge of the history of planning in South Africa; to demonstrate an understanding of the role of politics and socio-economic circumstances that guide regional planning internationally and in national context; to demonstrate skills in identifying and analysing planning problems according to planning policy and planning instruments and in solving them by applying/executing regional planning in South Africa; to demonstrate the ability, as an individual and in group context, to evaluate existing spatial planning frameworks; to demonstrate the ability to compile spatial framework plans as applicable to the different government spheres; the ability to communicate the contents of spatial framework plans orally to a group of peers and clients.

Module code: STTN111	Semester 1	

Title: Descriptive Statistics

Module outcomes:

A student who has completed this module should be able to demonstrate the following knowledge:

Fundamental knowledge of the most important elementary statistical techniques used every day, such as sampling methods, determining sample size, graphical representation of data, descriptive measures of locality and scattering, least squares line fitting, predictions by means of least squares line fitting, correlation coefficients, time series data and movement components in order to predict future outcomes, practical considerations with regard to questionnaires and sampling sizes; fundamental knowledge of probabilities and probability distributions, the central limit theorem, for large sample sizes the estimation of population parameters by means of point and interval estimation, to demonstrate problem solving skills by solving familiar and unfamiliar problems; to implement the acquired knowledge to problems involving the above-mentioned skills and techniques.

Module code: STTN122	Semester 2	

Title: Introductory Statistics

Module outcomes:

 At the end of the module the student should demonstrate knowledge of the following concepts and the ability to apply it as described below:
(i) statistical techniques used everyday, for example sampling methods, graphical representation of data and descriptive measures of locality and scattering;
(ii) fitting linear regression curves to bivariate data and using the least squares method;
(iii) making simple predictions by using appropriate curves, as well as by interpreting the correlation coefficient;
(iv) handling time series data and calculating movement components in order to predict future outcomes;
(v) carrying out simple probability calculations and using probability distributions;
(vi) the central limit theorem and applying it to practical problems;
(vii) estimating population parameters by means of point and interval estimation;
(viii) hypothetical testing for population averages and population proportions in one or two sampling cases.
(ix) to identify the presence and applicability of the above statistical concepts in a practical situation, as well as to perform statistical methods using manual analysis or statistical software.

Module code: STTN124	Semester 2	

Title: **Practical Statistics**

Module outcomes:

At the end of the module the student should be able to demonstrate knowledge of the following concepts and to apply them as described below:

(i) correlation and its interpretation, the method of least squares fitting to a regression function, prediction by means of a regression function, multiple linear regression and selection of predictors;
(ii) basic factor analysis and the interpretation of its results, interpretation of factor matrices and construct validity;
(iii) the hypothesis testing procedure, probability calculations, the central limit theorem, level of significance and p values;
(iv) one-way ANOVA testing procedures, the interpretation of results;
(v) practical significance of effect sizes of differences in averages and proportions for one and two populations;
(vi) categorical data analysis by means of contingency tables, chi-squared tests and independence tests;
(vii) distribution-free methods: the difference between parametric and nonparametric methods of inference, as well as deciding which method to use in a specific situation.
(viii) to identify the presence and applicability of statistical concepts in a practical situation, as well as to perform statistical methods using manual analysis or statistical software.

Module code: STTN121	Semester 2	

Title: **Introductory Statistical Inference**

Module outcomes:

A student who has completed this module should be able to demonstrate the following:

Fundamental knowledge of probabilities and probability distributions, the central limit theorem, estimation of population parameters by means of point and interval estimation, hypothesis testing for population averages and proportions for one and two samples, one way analysis of variance (ANOVA) and categorical data analysis, contingency tables and basic tests on categorical data; problem solving skills by analyzing familiar and unfamiliar problems, using acquired knowledge to solve simple probability problems, applying the knowledge gained above on data where applicable.

Module code: STTK211	Semester 1	

Title: **Probability Theory**

Module outcomes:

On completing the module, the student should be able to demonstrate knowledge of the following: concepts, such as outcome space, events, probability measures, counting processes, stochastic outcomes of events and the independence of events; important probability theorems, such as the law of total probability and the theorem of Bayes; stochastic variables, distribution functions and mass functions. Special attention will be given to discrete stochastic variables and the following distributions will be discussed in depth: binomial, geometric, negative binomial, hypergeometric and Poisson distributions. The following continuous random variables, together with their distribution functions will be discussed in detail: exponential, gamma and normal distributions. Functions of these variables will also be discussed. Probability structures of two or more stochastic variables will be defined in the same outcome space and functions of joint distributions. The student should be able to demonstrate knowledge of conditional distributions and the ability to apply

probability calculations to conditional distributions; to demonstrate knowledge of ordered statistics and the ability to apply it; to demonstrate knowledge of the expectation value of and standard deviation from all the important mass functions and density functions previously discussed; demonstrate knowledge of covariance and correlation of two stochastic variables, together with conditional expectation values and moment generating functions; to demonstrate knowledge of the first and second moment, two of the most important theorems in probability theory, namely the so-called law of large numbers and the central limit theorem.

Module code: STTN221	Semester 2	

Title: **Sampling Theory and Statistical Inference**

Module outcomes:
A student who has completed this module should be able to demonstrate fundamental knowledge of distributions derived from the normal distribution, several sampling methods and their properties, the method of moment estimation and the method of maximum likelihood estimation in order to estimate parameters, the efficiency of an estimator and sufficient statistics; to demonstrate problem solving skills in analysing familiar and unfamiliar problems, in using acquired knowledge to derive properties of distributions derived from the normal distribution, in estimating several parameters when different sampling methods have been applied, in estimating parameters by means of the method of moment estimation and maximum likelihood estimation, in determining whether a estimator is efficient and in finding sufficient statistics for a variety of problems; in applying these concepts to actual data.

Module code: STTN311	Semester 1	

Title**: Statistical Inference**

Module outcomes:
 A student who has completed this module should demonstrate the following: fundamental knowledge of statistical concepts, such as complete and sufficient statistics, hypothesis testing, duality of confidence intervals and hypothesis testing, informal measure of fit techniques, methods of summarising data, measures of locality and scattering, comparison of two samplings, comparison of matched samplings, design of experiments, analysis of categorical data and Bayesian inference; should demonstrate the ability to construct complete and sufficient statistics, to use the Neyman-Pearson paradigm to perform hypothesis testing, to apply the relationship between hypothesis testing and confidence intervals in the context of estimation, to draw conclusions by using descriptive statistical methods, to apply methods of summarizing data, to calculate measures of locality and scattering, to implement methods to compare two samplings and matched samplings, to understand different designs of experiment, to analyze categorical data and to use Bayesian inference methods.

Module code: STTK321	Semester 2	

Title: **Linear Models**

Module outcomes:
 A student having completed this module should be able to demonstrate an understanding of simple and multiple linear regression; understanding of the reasons for assumptions in the regression model and the derivation of the distributions of test statistics used in the inference that relates to linear regression models; to demonstrate the ability to derive the least squares and maximum acceptability parameters in a linear regression model; the

ability to describe the linear regression model in matrix and vector notation; to demonstrate the ability to diagnose any deviation from the assumptions and to apply remedial measures to rectify the deviations. He/she should demonstrate an understanding of the concepts of

simultaneous interference as applied in linear regression models; should demonstrate the ability to describe how qualitative and quantitative predictor variables are handled within the

frame of linear regression. He/she should demonstrate an understanding of the fundamental concepts of non-linear regression; the ability to describe the process of estimating parameters in non-linear regression models; the ability to describe the following models: logistic regression models and Poisson regression models; an understanding of the way in which these models relate to the general linear model; the ability to perform inferences that are associated with these models; the ability to implement linear regression models using simple calculations and computer software; the ability to diagnose models practically by applying diagnostic steps as discussed in the theory and to apply remedial measures in a practical context; and the ability to implement non-linear regression models using simple calculations and computer software.

Module code: STTK322	Semester 2	

Title: **Statistics Project**

Module outcomes:
A student having completed this module should be able to demonstrate the ability to carry out a successful statistical project, from design to analysis; to identify appropriate models for a given data system and to use SAS or R to implement the appropriate model; to identify the previously learnt theory on basic statistical analysis with the practical nature of the project and to apply the techniques; to compile appropriate documentation for the project; to develop skills in oral presentation to present the project in a professional set-up; to demonstrate the necessary computer skills needed to handle statistical analysis by means of SAS and R, but also to handle a greater variety of problems; to carry out computer-based simulations with the aid of SAS and R.

Module code: TGWN121	Semester 2	

Title: **Statics and Mathematical Modelling**

Module outcomes:
On completing this module, the students should be able to do the following: demonstrate fundamental knowledge of geometric vectors and their operational rules, vectors, forces, components, scalar and vector product, Cartesian forms, resultant of two- and three-dimensional systems of force through a point, the principle of propagation, moments, couples, reduction of systems of forces to a single force and a single couple, equilibrium in a plane and equilibrium in space, friction and moments rotating around axes, the modelling process, geometric similarity and proportionalities, dimensional analysis and the theorem of Buckingham; to demonstrate problem solving skills by analysing familiar and unfamiliar problems, by using knowledge of techniques to determine resultants of different types of systems of force, by solving equilibrium problems in two and three dimensions, by forming and solving models by means of proportionality relations and dimensional analysis, and by fitting models to data.

Module code: TGWN122	Semester 2	

Title: **Mathematical Modelling and Vector Algebra**

Module outcomes:
On completing this module, students should be able to do the following: demonstrate fundamental knowledge of the steps in the mathematical modelling process, geometric similarity, proportionalities, interpolation and fitting of a curve to data by means of least squares, the die L_1 norm and the Tsjebisjeff norm, dimensional analysis, the theorem of Buckingham, differential equations, separable differential equations, initial conditions, modelling of growth processes, including Malthus and logistic growth, cooling problems, mixing problems and chemical reactions, geometric vectors, operations with them and use of them,

and applications of them to forces and equilibrium problems; demonstrate problem solving skills by analysing familiar and unfamiliar problems, using knowledge of techniques to build mathematical models, solve separable differential equations, fit models to data, modelling by means of dimensional analysis; building models using separable differential equations and modelling and solving geometrical and statics problems by means of vectors.

Module code: TGWN211	Semester 1	

Title: **Dynamics I**

Module outcomes:
On completing this module, students should be able to do the following: demonstrate fundamental knowledge of kinematics (square, normal, tangential and cylindrical coordinates) and kinetics of a single particle (force, acceleration, work, energy, momentum, impulse), a system of particles (force, acceleration, work, energy, momentum, impulse) and a rigid body (force, acceleration, work, energy, momentum, impulse, moment of inertia, angular impulse and angular momentum), all moving along a straight line or a curved trajectory; demonstrate problem solving skills by analysing familiar and unfamiliar problems and using knowledge of kinematics and kinetics to calculate time duration, displacements, velocities, accelerations, forces, word done, energy, momentum, impulse, moment of inertia, angular impulse and angular momentum.

Module code: TGWN212	Semester 1	

Title: **Differential Equations and Numerical Methods**

Module outcomes:
On completing this module students should be able to do the following: demonstrate fundamental knowledge of first-order ordinary differential equations, the Laplace transform and the methods of Euler, Heun en Runge-Kutta for solving a single and a set of differential equations numerically, demonstrate problem solving skills by solving familiar and unfamiliar first order ordinary differential equations through separation of variables and conversion to exact differential equations, and by using them to model real phenomena, solving linear differential equations with constant coefficients using the Laplace transform, and solving any type of ordinary initial value problem numerically by using computers, and amongst others utilizing the MATLAB computer software.

Module code: TGWN221	Semester 2	

Title**: Dynamics II**

Module outcomes:
On completing this module students should be able to do the following: demonstrate fundamental knowledge of the theory of flexible cables, internal forces and deformation of simple beams, and the motion of satellites and planets, demonstrate problem solving skills by solving familiar and unfamiliar problems involving deformations in beams and cables acted on by forces, and determining the orbits and positions of satellites.

Module code: TGWN222	Semester 2	

Title: **Numerical Analysis**

Module outcomes:
On completing this module the student should be able to do the following: demonstrate fundamental knowledge and insight into the theory of basic numerical methods for general occurring mathematical problems, amongst which are the solving of non-linear equations, determining interpolation polynomials and the numerical determining of definite integrals, demonstrate problem solving skills by solving non-linear equations through iteration techniques, determining the interpolation polynomials of Lagrange and Newton, determining definite integrals by means of the trapezium method, Simpson's rule, Romberg integration

and Gauss quadrature, and the computer application of these techniques, show a fondness for this field of study and demonstrate insight into the relation between reality and abstraction, model and solution; reveal a Christian or alternative perspective on the subject.

Module code: TGWN311	Semester 1	

Title: **Partial Differential Equations**

Module outcomes:
On completing this module the student should be able to do the following: demonstrate fundamental knowledge of real-life problems where the mathematical model led to partial differential equations and the analytical solving of partial differential equations such as the wave, heat and potential equation and the electric charge problem, Fourier series, orthogonal functions and polynomial methods and the Sturm-Liousvile problem; demonstrate problem solving skills by analysing familiar and unfamiliar problems, applying knowledge of techniques that are used to solve differential equations with methods using power series, to determine Fourier series and chandelling standard problems with the Fourier method.

Module code: TGWN312	Semester 1	

Title: **Partial Differential Equations (Numerical)**

Module outcomes:
On completing this module the student should be able to do the following: demonstrate fundamental knowledge and insight into the discretisation of ordinary and partial differential equations, the special properties of tridiagonal matrices, calculation problems caused by ill-conditioned and sparse systems of linear equations, convergence properties of iterative methods of systems of linear equations, solving parabolic, elliptical and hyperbolic differential equations numerically, performing iterative methods with MATLAB on a computer; demonstrate problem solving skills in numerically solving two point boundary value problems, the heat equation, the potential equation and the wave equation with the finite difference methods and in implementing these by computer; show a fondness of this field of study and demonstrate insight into the relation between reality and abstraction, model and solution; reveal a Christian or alternative perspective on the subject.

Module code: TGWN321	Semester 2	

Title: **Dynamics III**

Module outcomes:
On completing this module the student should be able to do the following: demonstrate fundamental knowledge and insight into the kinematics and kinetics of a rigid body in space, the Lagrange formulation for dynamics and the basis of variation calculus; demonstrate skills in solving problems describing motion and the constraints on motion, modelling the three-dimensional motion of a rigid body, stationary curves for functionals formed through integrals; show a fondness of this field of study and demonstrate insight into the relation between reality and abstraction, model and solution; reveal a Christian or alternative perspective on the subject.

Module code: TGWN322	Semester 2	

Title: **Optimisation**

Module outcomes:
On completing this module, students should be able to do the following: demonstrate fundamental knowledge of analytical and numerical optimisation techniques for functions of one or more variables, including problems with restrictions on unevenness and evenness; demonstrate problem solving skills by applying a variety of mathematical optimisation techniques to familiar and unfamiliar unrestricted and restricted problems and implementing

these techniques by computer with MATLAB as computer language.

Module code: WISN111	Semester 1	

Title: **Introductory Algebra and Analysis I**

Module outcomes:
On completing this module, students should be able to do the following: demonstrate fundamental knowledge of the concept of functions, polynomials in one variable with factor theorem, remainder theorem and synthetic division, rational functions and partial fractions, absolute value function, circle measure and inverse functions, trigonometric and inverse trigonometric functions, hyperbolic and inverse hyperbolic functions, exponential and logarithmic functions, limits, continuity, differentiability and indefinite integrals of all the above mentioned functions, complex numbers; demonstrate problem solving skills by analysing familiar and unfamiliar problems, using the knowledge of techniques to develop powers of first degree polynomials, calculating the limits, derivatives and indefinite integrals of all the above mentioned functions and performing simple operations with complex numbers.

Module code: WISN113	Semester 1	

Title: **Basic Mathematical Techniques**

Module outcomes:
At the end of this module, students have mastered the following topics at an introductory level: the concept of a mathematical function elucidated from examples that include exponential and logarithmic functions, the concept of differentiation, a method to solve sets of linear equations, matrix algebra, linear programming problems in two variables , analysis of the rate of change of mathematical functions by using differentiation to investigate the characteristics of the function. The student acquires skills to recognise the presence and applicability of mathematical concepts in a scientific situation and to construct a mathematical model of the problem situation in order to reach a solution by applying differentiation techniques, arithmetic techniques or linear algebra.

Module code: WISN121	Semester 2	

Title**: Introductory Algebra and Analysis II**

Module outcomes:
Module outcomes:
On completing this module, students should be able to do the following: demonstrate fundamental knowledge of logic, the system of real numbers, mathematical induction, permutations and combinations and the binomial theorem, De Moivre's theorem and its applications, L'Hospital's rule and its applications, the fundamental theorems of differential and integral calculus, the use of derivatives in optimisation and curve sketching, basic concepts of power series and the basic theorems on the converging of series, Taylor series, the basic properties and applications of the definite integral, applications of integration to surfaces, lengths and volumes; demonstrate problem solving skills by analysing familiar and unfamiliar problems, using knowledge of techniques by applying logic to systems of numbers, proving theorems with mathematical induction, determining the number of arrangements and selections from a set, performing operations with complex numbers, judging convergence of power series, calculating Taylor series, determining limits using L'Hospital's rule, sketching functions, formulating optimisation problems mathematically and using knowledge of derivatives to solve them, by determining definite integrals and calculating surfaces, lengths and volumes.

Module code: WISN211	Semester 1	

Title**: Analysis III**

Module outcomes:
On completing this module, students should be able to do the following: demonstrate a thorough knowledge and insight into al the aspects of the differential calculus of multivariate functions: partial and directional derivatives, the gradient function, optimisation problems, including Lagrange's method, the theory of multiple integrals to calculate partial derivatives, directional derivatives and gradients, and double and triple integrals; demonstrate problem solving skills by analysing familiar and unfamiliar problems, using knowledge of techniques to solve practical problems modelled with multivariate functions. Students should demonstrate the ability to use the geometric and physical meaning of the above-mentioned concepts to abstract the underlying mathematical structure of applied problems and to interpret the significance of the mathematical solution.

Module code: WISN212	Semester 1	
Title: **Linear Algebra I**		

Module outcomes:
On completing this module students should be able to do the following: demonstrate a thorough knowledge and insight into the solvability of systems of linear equations; the basic properties of Euclidic spaces and linear transformations, interdependency of general vector space concepts; demonstrate the ability to determine Eigen values and Eigen vectors; demonstrate problem solving skills by analysing familiar and unfamiliar problems, using knowledge of techniques to solve systems of linear equations in the context of a vector space; to perform matrix operations; to determine bases for subspaces; to calculate Eigen values and Eigen vectors; to execute these matrix calculations and interpret the results.

Module code: WISN221	Semester 2	
Title: **Analysis IV**		

Module outcomes:
On completing this module, students should be able to do the following: demonstrate a thorough knowledge and insight into line integrals of scalar valued and vector valued functions of two and three variable functions; the fundamental theorem and Green's theorem for line integrals and their applications; surface integrals of scalar valued and vector valued functions; the theorem of Stokes and the divergence theorem of Gauss and their applications; the theory of higher order linear differential equations and methods (of undetermined coefficients and the variation of parameters) to solve second order linear differential equations with constant coefficients; sequences and series of real numbers; tests for convergence (integral test, comparison test, limit comparison test) and tests for absolute convergence of series of real numbers (ratio and root tests); demonstrate problem solving skills by analysing familiar and unfamiliar problems; using knowledge of techniques to calculate line integrals of scalar valued and of vector valued functions and use them in solving practical problems (such as the calculation of surfaces and the calculation of word done by forces along curves); by calculating surface integrals of scalar valued and vector valued functions of two and three variables and use them to solve practical problems (such as calculating flow rates through surfaces); by using the Theorem of Stokes to calculate surface integrals by using line integrals along closed curves and vice versa; by using the theorem of Gauss to calculate surface integrals of vector fields over closed surfaces by evaluating triple integrals; by determining the solutions of homogeneous linear differential equations that have constant coefficients and by solving non-homogeneous linear equations using the methods of indeterminate coefficients and the variation of parameters; by using the different (relevant) tests for the convergence of series of real numbers to test for the convergence of these series.

Module code: WISN222	Semester 2	

Title: Linear Algebra II

Module outcomes:
On completing this module, students should be able to do the following: demonstrate a thorough knowledge and insight into general vector spaces and bases; inner products; vector norms; linear transformations. The student acquires knowledge and insight into matrix and vector norms and stepwise orthogonal transformations on a matrix; learn to execute LU factorising and to calculate certain systems of differential equations; demonstrate problem-solving skills by analysing familiar and unfamiliar problems; by using knowledge of techniques to determine inner products, vector norms and linear transformations.

Module code: WISN311	Semester 1	

Title: Real Analysis I

Module outcomes:
On completing this module, students should be able to do the following: demonstrate a rounded and systematic knowledge and insight into the theory of real numbers; the topology of vector spaces with finite dimensions; compactness and connectedness of sets; continuous and uniform continuous functions; continuous images of compact and connected sets; implicit functions and the implicit function theorem in three dimensions; convergence of sequences and Cauchy sequences; convergence and continuous convergence of sequences of functions; Riemann and abstract integration, sigma algebras and measurable spaces; general measurable and Borel measurable functions; measures on measurable spaces; integral and measurable functions; the monotone convergence theorem; Fatou's lemma and Lebesgue's convergence theorem; the relation between Riemann and Lebesgue integrals; the characterisation of Riemann integrable functions in terms of continuity; demonstrate problem solving skills as an individual and as member of a group by analysing familiar and unfamiliar analysis problems, by testing functions for continuity, by solving problems from integration theory and by applying abstract mathematical theorems and concepts in areas such as probability theory.

Module code: WISN312	Semester 1	

Title: **Combinatorics**

Module outcomes:

On completing this module, students should be able to do the following: demonstrate a rounded and systematic knowledge and insight into the fundamental counting principles; the binomial theorem; the pigeon hole principle; generalised permutations and arrangements; recursion relations and their solutions, and generating functions; fundamental graph theoretical concepts; partition numbers; imbedding of graphs into surfaces; concept of connectedness; Menger's theorem; independence numbers; Hamilton cycles and Eulerian revolutions; colouring of graphs; demonstrate problem solving skills by interpreting familiar and unfamiliar combinatorial problems and using known techniques to solve them; by formulating problems in terms of graphs; by applying and calculating generating functions; by recognising classical discrete probability problems and solving them; by understanding the arguments and their motivations in proving of theorems and being able to give own formulations of them, and applying these results to solve concrete or abstract problems.

Module code: WISN321	Semester 2	

Title: **Real Analysis II**

Module outcomes:

On completing this module, students should be able to do the following: demonstrate a rounded and systematic knowledge and insight into the derivative of vector functions and of multivariate functions and applying them to determine differentials; the concept differentiability; the concept directional derivative and its application to solve familiar an unfamiliar problems in the field of real analysis. Students must also have a rounded knowledge of Taylor's theorem and its applications; the general implicit function theorem; improper integrals and the calculation of integrals, as well as the theorems of Radon-Nikodym and Fubini and how to use them. Students must demonstrate skills to test for convergence by using improper integrals and infinite series; the ability to calculate the maxima and minima of multivariable functions; to apply various theorems from measure and integration theory in areas like probability theory, functional analysis and financial mathematics.

Module code: WISN322	Semester 2	

Title: **Algebraic Structures**

Module outcomes:

On completing this module, students should be able to do the following: demonstrate a rounded and systematic knowledge and insight into general algebraic structures, for instance groups, rings and bodies, permutations, polynomials with integer coefficients and factor rings formed from polynomial rings; demonstrate skills to prove the fundamental theorems of the theory and apply the concepts amongst others to the integer numbers modulo 'n by means of logical, axiomatic arguments; to give a cyclical representation of permutations; to perform calculations with polynomials with integer coefficients (modulo n); demonstrate skills to apply the theory of factor rings formed from polynomial rings and to perform error correcting coding and decoding; to have the ability to solve in unknown contexts problems that relate to algebraic structures by applying relevant techniques.

Module code: WVES221	Semester 2	

Title: Understanding the economic world

Module outcomes:

Upon completion of this module, you should be able to:

• have a fundamental knowledge base of a selection of world views and ideologies and demonstrate their critical understanding through an ability to compare the nature and function, as well as different contemporary manifestations of these world views and ideologies;
• have the ability to understand the interrelatedness of phenomena such as occurs in natural and social systems, and from this vantage point, analyse and evaluate real life problems or case studies based on core issues of our time, such as poverty, constant change, human rights, HIV-AIDS, power abuse, corruption, racism, xenophobia, etc.;
• be able to articulate their personal world view and use it as a point of departure for arguing and communicating feasible solutions to core issues and problems of our time in a typical academic manner

Module code: WVES311	Semester 1	

Title: **Business ethics**

Module outcomes:

After completion of this module you should:
1. Possess knowledge of
      - Selected ethical theories
      - Moral decision-making strategies
      - Selected socio-economic ethical issues
      - Selected issues and approaches with regard to business ethics
      - The nature of organizations and management from an ethical perspective
2. Possess the ability and skills to apply the above knowledge to case studies
3. Possess the ability and skills to analyse and evaluate the abovementioned theories and issues from different philosophical and ideological perspectives.

Module code: WVNS211	Semester 1	

Title: **Understand the natural world**

Module outcomes:

After this module has been completed successfully, it will serve the student as a fundamental source of knowledge of the nature and function of worldviews and ideologies as they have developed historically from science, from antiquity to the post-modern era. The student will also understand the relation between norms and science, the influence of science and technology on the spiritual, cultural and material worldviews of the human being, his society and environment. The student must be able to understand and discuss the essential ideas in the development of science with reference to value systems that function in his worldview.

Module code: WVNS221	Semester 2	

Title**: Science and society**

Module outcomes:

After this module has been successfully completed, the student must be able to identify, demonstrate and react to basic issues in the contemporary discourse on science, technology and society, with special reference to science and technology systems in South Africa. The student must also be able to identify some of the most important ethical issues in the subject matter of a programme and critically react to them according to a

value-based orientation from a specific worldview. He/she must be able to form a well thought-out rational standpoint on the concept of sustainable development, including its socio-economic implications. The student must be able to discuss perspectives on different thought systems, and be able to view contemporary issues in science and technology within a systems perspective.

Module code: WVNS222	Semester 2	

Title**: Earth and life: Foundational issues in the Environmental Sciences**

Module outcomes:
On successful completion of WTNL222 students will:

a) obtain a thorough and systematic knowledge of the most important fundamental questions in the specific field of the Environmental sciences and shoud be able to demonstrate that he/she understands the philosophical assumptions involved in the fundamental questions;

b) use and understand what the particular forms of etics are that can be applied and used in the Environmental sciences. You should be able to apply a specific ethical code and conduct for the problems to be analysed and evaluated in the Environmental sciences;

c) evaluate by critical analysis and synthesis of the study material on a specific theme in the Environmental sciences and be able to write an academic report on it.
